Who are we?

SBE is a creative intelligence partner, dedicated to building presence and relevance for forward-thinking institutions, brands, and governments.

By uniting strategy, storytelling, design, and engineered execution, SBE helps organizations express who they are and achieve their goals with confidence and precision.

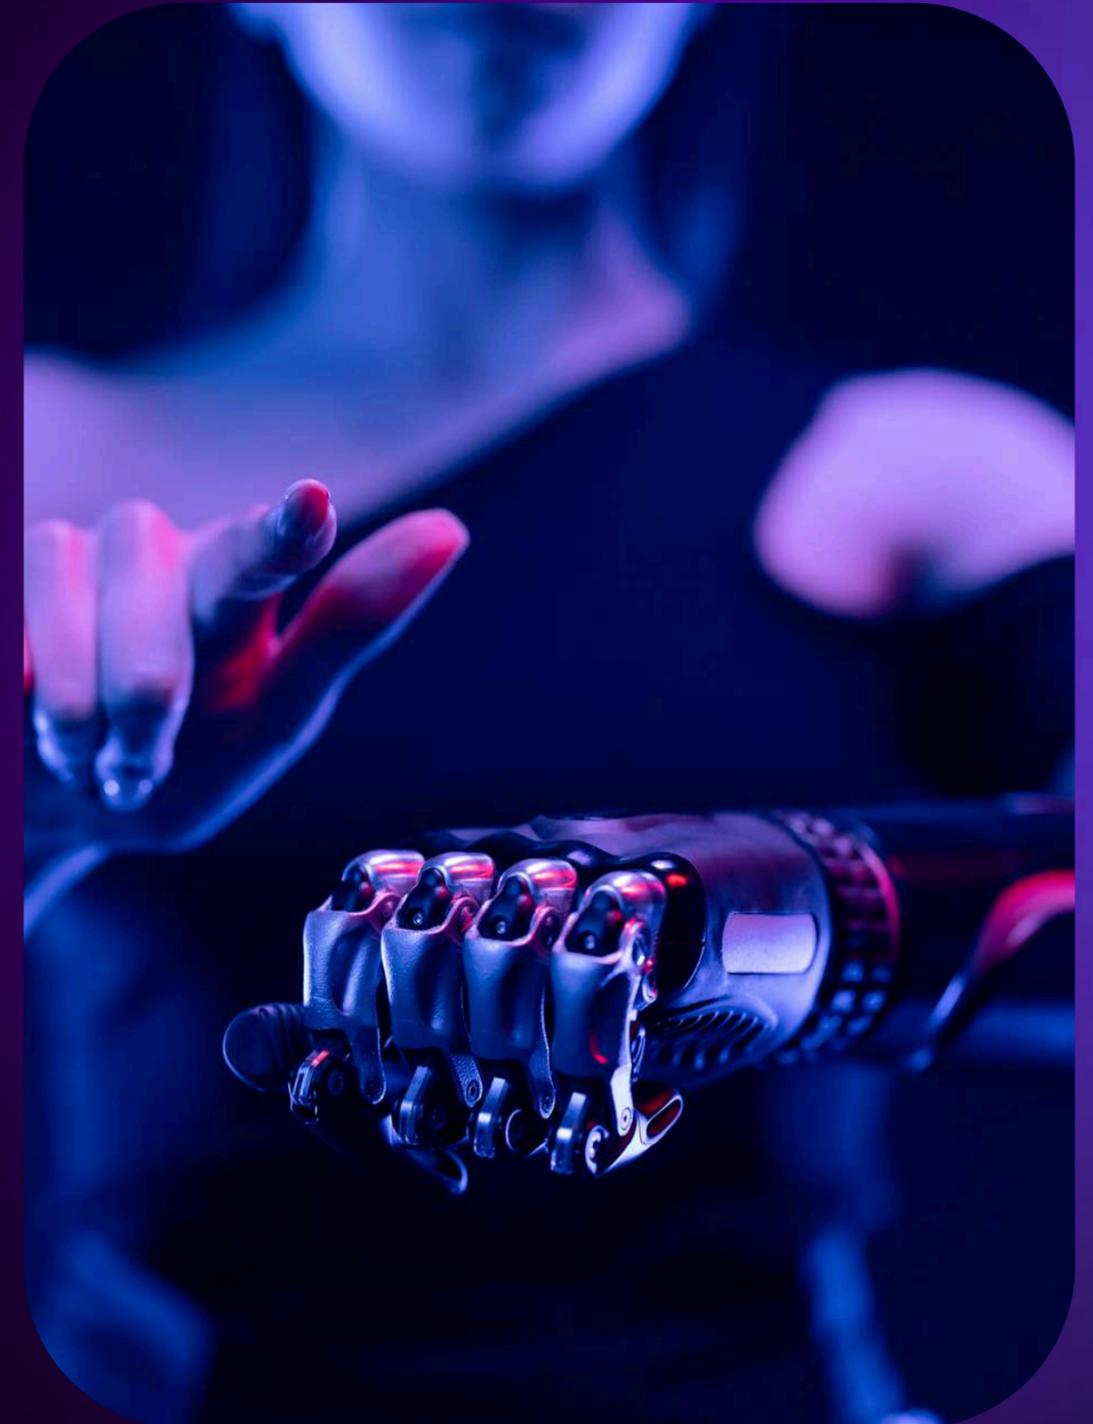

MISSION ↗

We partner with forward-thinking institutions, brands, and governments to translate vision into meaningful influence. Through insight, design, and precise execution, we create experiences and systems that bring clarity to complexity and set ideas in motion with purpose and impact.

VISION ↗

To shape a world where clarity, intelligence, and thoughtful design elevate how ambitious organizations are seen, understood, and remembered.

TRUSTED BY

OUR TECHNOLOGY SOLUTION

CONTENT

Hyper Realistic Content

Our hyper-realistic content immerses audiences in lifelike environments, enhancing engagement in product showcases, brand activations, and storytelling with stunning detail and emotional impact.

We use advanced CGI, 3D rendering, and real-time ray tracing for stunning detail and realism. Our high-resolution animations and simulations are optimized for LED screens, projection mapping, AR, and VR, with precise lighting, textures, and physics for a seamless, lifelike experience.

Perfect for luxury brands, retail, exhibitions, and immersive events, our hyper-realistic content enhances digital storytelling with stunning visuals. From LED walls to interactive installations and virtual showrooms, it captivates audiences and elevates brand narratives.

Anamorphic Content

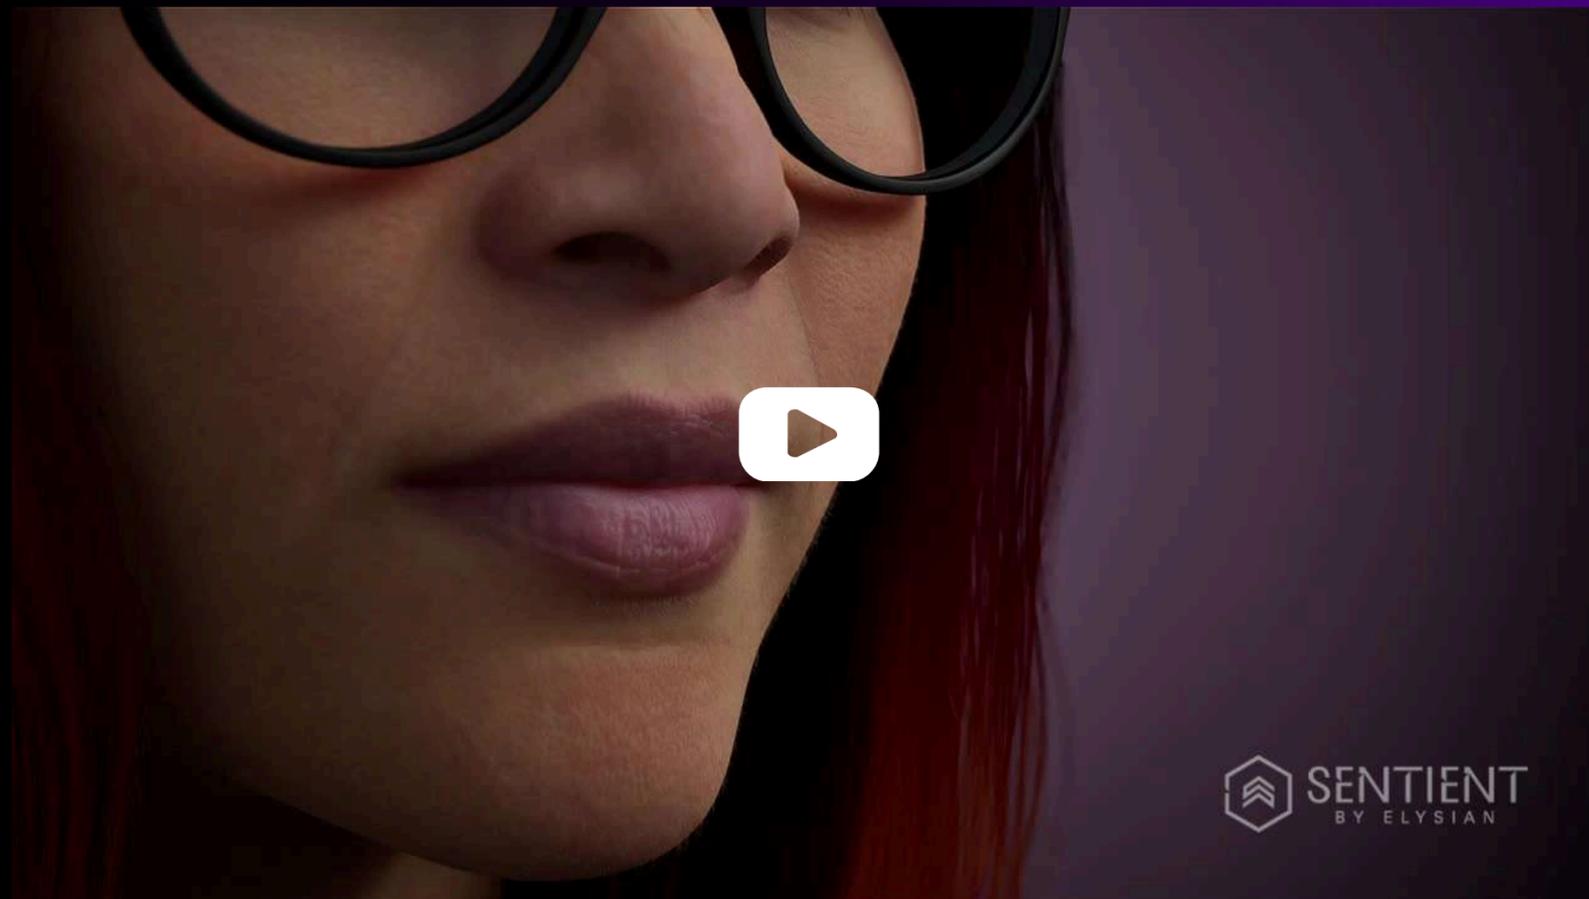

Anamorphic projections create an illusion of depth and transformation, engaging your audience with a visually immersive experience that only reveals its magic from a specific perspective.

We combine 3D modeling, motion graphics, and high-resolution projections to craft tailored content. Using advanced software, we distort visuals to create a seamless, immersive experience that interacts with the physical space.

Perfect for brand activations, exhibitions, retail spaces, and large-scale event as like festivals. Ideal for brands, event planners, retailers, and exhibition organizers looking for innovative ways to captivate audiences.

Metahuman

MetaHuman blends real-time AI, high-fidelity 3D scanning, and dynamic animation to produce a digital presence that reacts with genuine human nuance. From micro-expressions to conversational flow, each interaction feels authentically alive—transforming passive viewers into active participants.

It brings digital characters to life with astonishing realism, using advanced AI and facial mapping to recreate natural human expression. It invites audiences into an interaction so intuitive and lifelike that the boundary between human and digital disappears the moment they engage.

Live AR

As viewers move around a physical scale model, the world comes alive on screen. Buildings label themselves, traffic flows, greenery grows in, and future phases appear seamlessly—perfectly aligned to the miniature environment. The experience feels intuitive and cinematic, as if the physical model is revealing its hidden layers in real time.

Behind the scenes, Live AR links a real-world scale model to a fully synchronized 3D digital twin. A physical tracking layer monitors the camera’s position and orientation, while a real-time rendering engine mirrors every movement. A spatial mapping and calibration system maintains precise 1:1 alignment, and the display output layer composites and delivers augmented visuals instantly to a large screen. The result is a powerful, real-time AR experience that turns static models into interactive storytelling tools.

KINETIC STRUCTURE

The Kinetic Reveal LED Cube

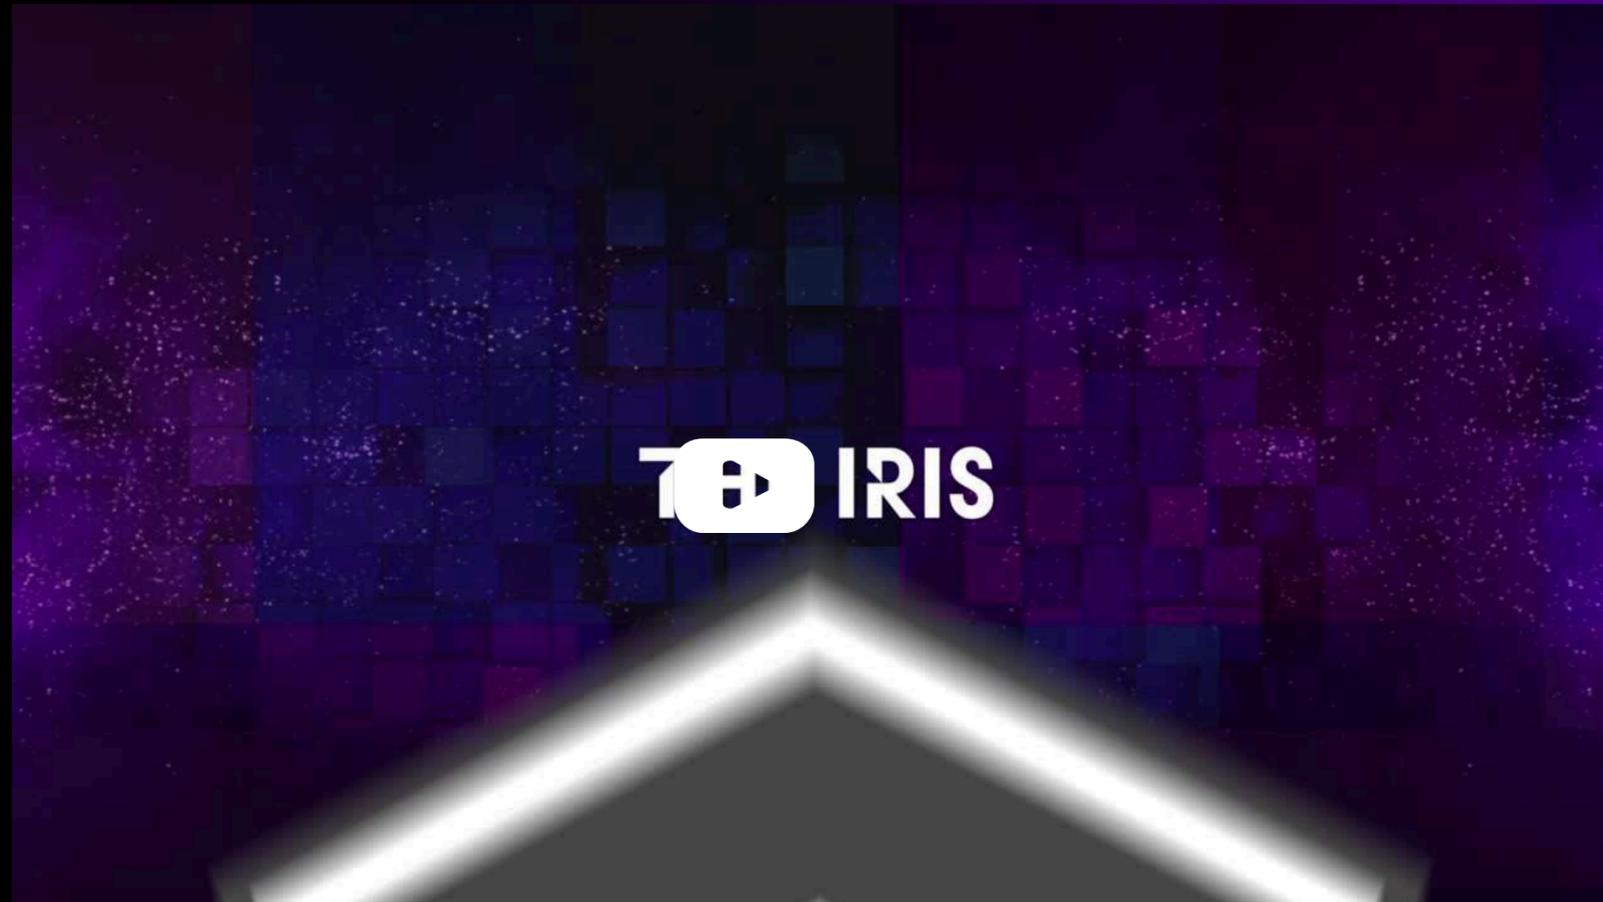

The Reveal Cube captivates audiences with its dynamic, glowing presence. At the center sits an animated 3D architectural model—rotating, unfolding, and transforming to showcase its form in a visually rich and engaging way.

A fully rendered 3D model rotates smoothly within the Cube, revealing angles, shapes, and design features that are typically overlooked. The animation highlights both macro and micro details, allowing audiences to appreciate the architecture from every perspective. The model breaks down into stages, peeling back layers to show structural components, decorative patterns, and hidden design nuances. This progressive reveal guides the viewer through an engaging architectural narrative. LED walls surrounding the Cube shift in color, tone, and texture to reflect changes in lighting or environmental conditions. These visual transitions demonstrate how shadows, reflections, and illumination interact with the structure over time, enhancing the storytelling.

This activation merges technology, design, and narrative to create a multi-sensory exploration of architecture. It transforms static structures into living stories—inviting audiences to engage, observe, and connect with the subject in a meaningful, memorable way.

The Iris

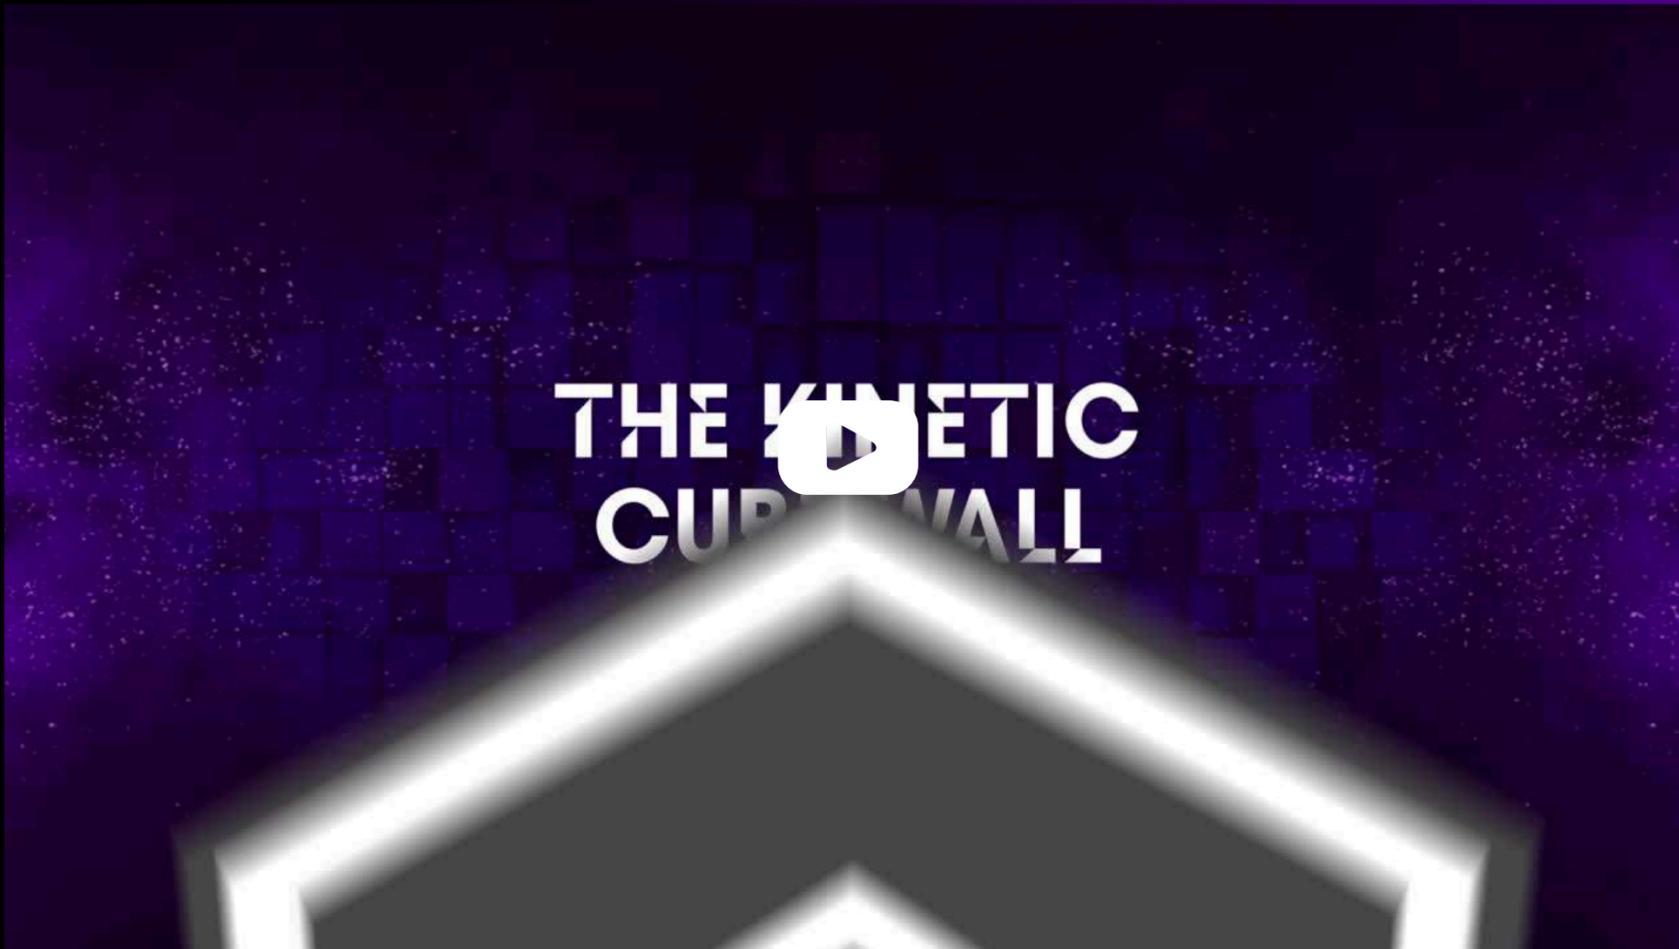

Standing before IRIS, audiences experience a powerful sense of presence. Light pulses, rotates, and breathes, creating the illusion of a living digital eye that responds to sound, rhythm, and environment. The movement draws viewers in, producing a hypnotic depth that anchors the entire space.

Technically, IRIS is a 4-meter kinetic sculpture built from custom, DMX-controlled LED rings arranged in layered circular arcs. Each segment can move and animate independently or in unison, enabling ambient modes, dramatic energy builds, radial sweeps, or synchronized musical responses. The technology disappears into the experience, leaving visitors with a lasting emotional impression of motion, light, and scale.

Kinetic Cube Wall

The Product Area features a series of 43-inch LED screens designed to showcase key innovations, solutions, and the client capabilities. This dynamic zone is organized into thematic pillars each representing a core aspect of the client’s vision for a future-ready digital ecosystem.

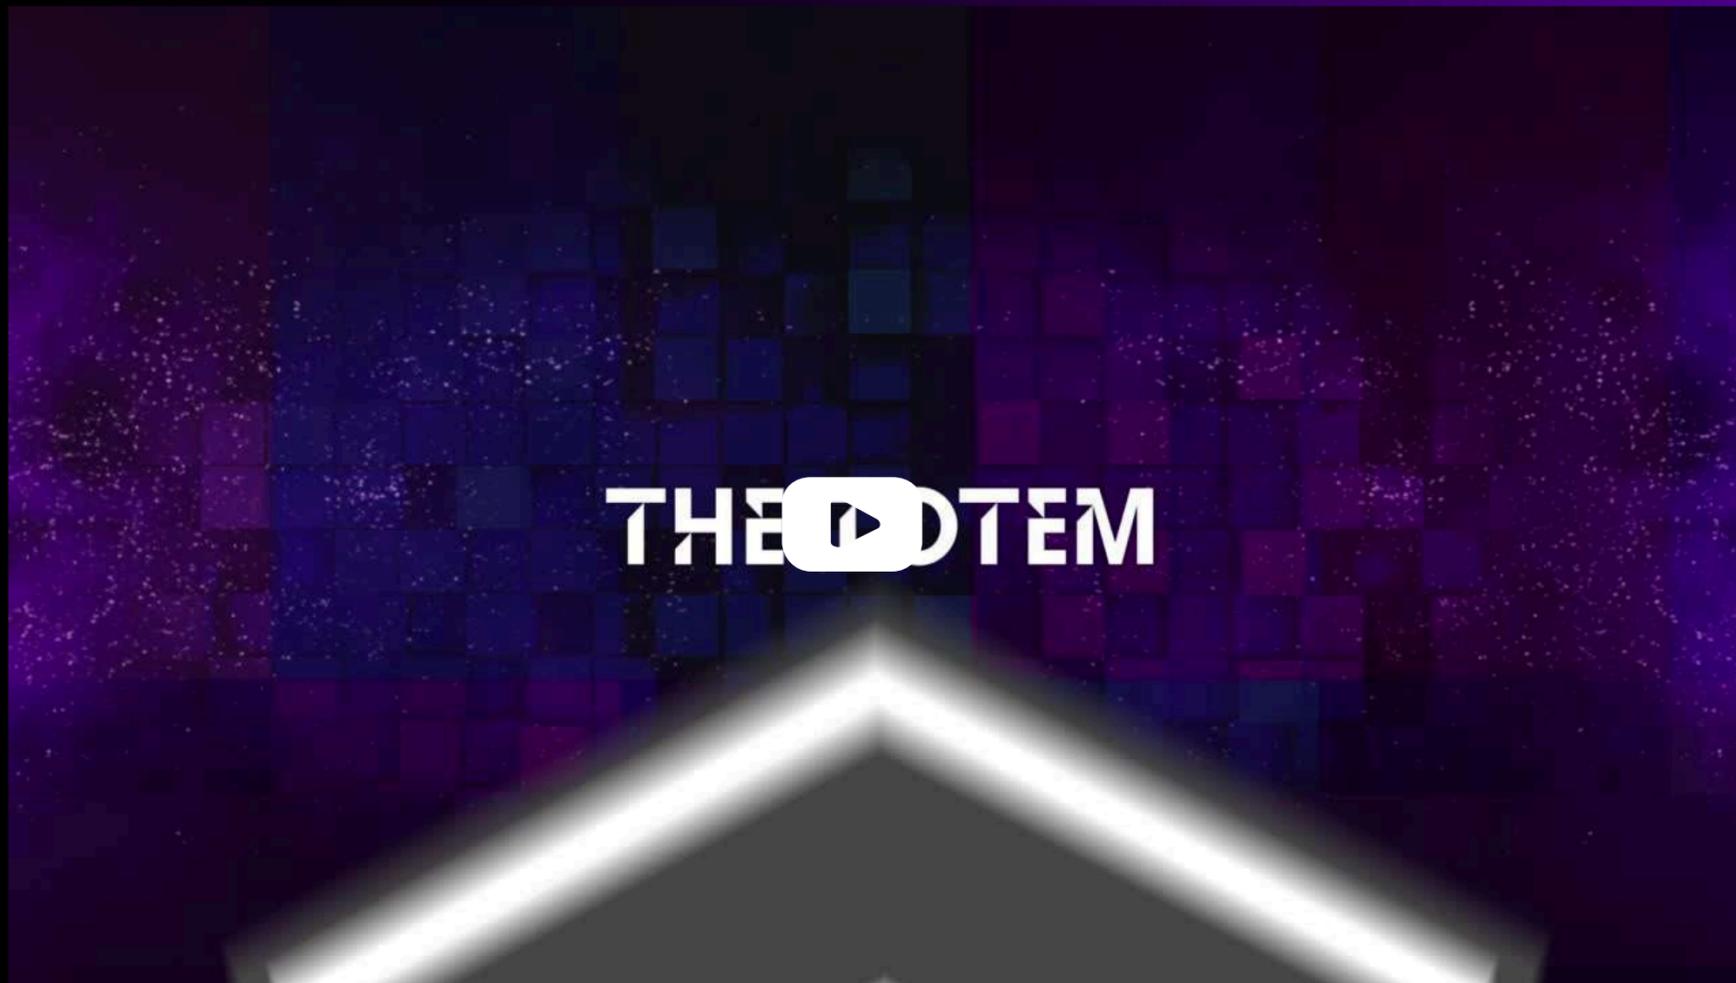

In this interactive activation, visitors engage with a Kinetic Cubes Wall that visually represents the client’s services. When stepping onto the activation podium, users trigger the installation to come to life — the rotating kinetic cubes begin displaying an animated storyline that highlights core solutions.

Visitors can scan a QR code that leads to a dedicated webpage offering further details about the showcased services. They are also encouraged to take a selfie, which is then transformed into an animated “avatar” and displayed across the kinetic cubes wall.

This personalized feature reinforces the message that every digital human, chatbot, and virtual solution can be fully customized and tailored to meet the unique needs of any business and its customers.

The Totem

Vertical LED totems stand individually or beside a podium equipped with tablets, creating a flexible environment suited for exhibitions, hospitality showcases, commercial demos, or informational presentations. Whether used as a guided interaction station or as a standalone digital canvas, the system delivers a professional, immersive, and intuitive experience.

Users engage to explore content, simulate scenarios, compare options, or navigate workflows in real time. The totems output high-resolution sequences such as architectural perspectives, category overviews, capacity visuals, service highlights, data visualizations, or promotional narratives—adaptable to any industry or environment. This transforms information into a captivating, easy-to-understand visual journey.

Triple Helix Flat

A versatile display that turns any space into a dynamic digital showcase. Whether static, motion-based, or interactive, it captivates with high-resolution visuals and seamless storytelling. Visitors can engage via touch, motion sensors, or transparent OLED overlays for a futuristic brand experience.

The tech adapts to any setting with static, motion-based, or interactive modes. It supports touch, motion tracking, and gesture control, integrates with transparent OLED for holographic effects, and scales to various sizes. Seamlessly blending real-time data and branded content, it delivers a dynamic, immersive experience.

Triple Helix Cylinder

Guests embark on an interactive journey through the venue, encountering a kinetic structure that respond to movement and touch, symbolizing the evolution of technology and innovation.

These dynamic installations illuminate key milestones, guide visitors, and enhance brand and product awareness. Activated by motion, they move in perfect synchronization, creating an engaging and immersive experience.

Sliding Rotating Dynamic Wall

It's a dynamic kinetic display with motorized panels, reflective surfaces, and LED screens. Each panel moves independently or synchronously, creating an evolving visual experience. The system uses precise choreography and adaptive content mapping to ensure seamless visuals across shifting surfaces, enhancing depth and interactivity.

This activation provides a comprehensive showcase of your brand and services, delivering information in a simplified yet immersive way. Visitors leave with a deeper appreciation of the experience, effortlessly grasping key concepts and insights.

Sliding Lens

Visitors are drawn to a sleek podium with a curved sliding lens, glowing invitingly.

They interact through a touch interface, selecting insightful topics related to engineering and defence. The lens dynamically showcases immersive content, revealing the impact of defence acquisition through engaging visuals and data.

This activation fosters curiosity and connection, leaving visitors with a deeper understanding of the industry, the product and the services offered.

Sliding Face

Designed as a visionary narrative tool, it engages visitors by delivering information and immersive storytelling in a dynamic, visually striking way. The 3D AI face serves as a powerful narrator, guiding audiences through experiences with tailored content and lifelike interactivity.

This technology combines sliding screen innovation with an interactive 3D AI face, built from flexible LED panels that are fully programmable with custom content and voice-over, offering a futuristic way to inform, educate, and narrate brand stories.

Ideal for brands, museums, and innovation hubs, it transforms storytelling into an unforgettable journey. Whether used for exhibitions, brand activations, or educational experiences, this cutting-edge installation captivates audiences and enhances engagement.

Conveyor Belt

Visitors encounter a lively conveyor belt displaying various products, complemented by an OLED screen that enhances engagement.

Each model stops at the OLED screen, which presents detailed product insights, including features and services. After a brief showcase, the product smoothly transitions to the next, ensuring a seamless experience.

This activation provides a comprehensive showcase of the brand and services, delivering information in a simplified yet immersive way. Visitors leave with a deeper appreciation of the experience, effortlessly grasping key concepts and insights.

Kinetic Sensor Motion Activated LED Wall

As guests admire the wall, its kinetic features activate in response to sensory input and the movement of visitors interacting with it, creating a captivating, dynamic display that enhances the atmosphere of your stand. The LED wall can display the brands logo or interactive content.

This activation serves as a striking centerpiece, embodying the vibrancy and essence of your brand. It creates a memorable, immersive experience for your attendees. The wall can be customized depending on the size of the stand, or can also be used as a permanent installation in locations.

Kinetic Wall

The Kinetic Wall captivates visitors with its stunning, dynamic movement that enhances the exhibition space. This interactive movement fosters curiosity and engagement, leaving visitors with a memorable experience.

This activation serves as a striking centerpiece, embodying the vibrancy and essence of your brand. It creates a memorable, immersive experience for your attendees. The wall can be customized depending on the size of the stand, or can also be used as a permanent installation in locations.

Kinetic Immersive Globe

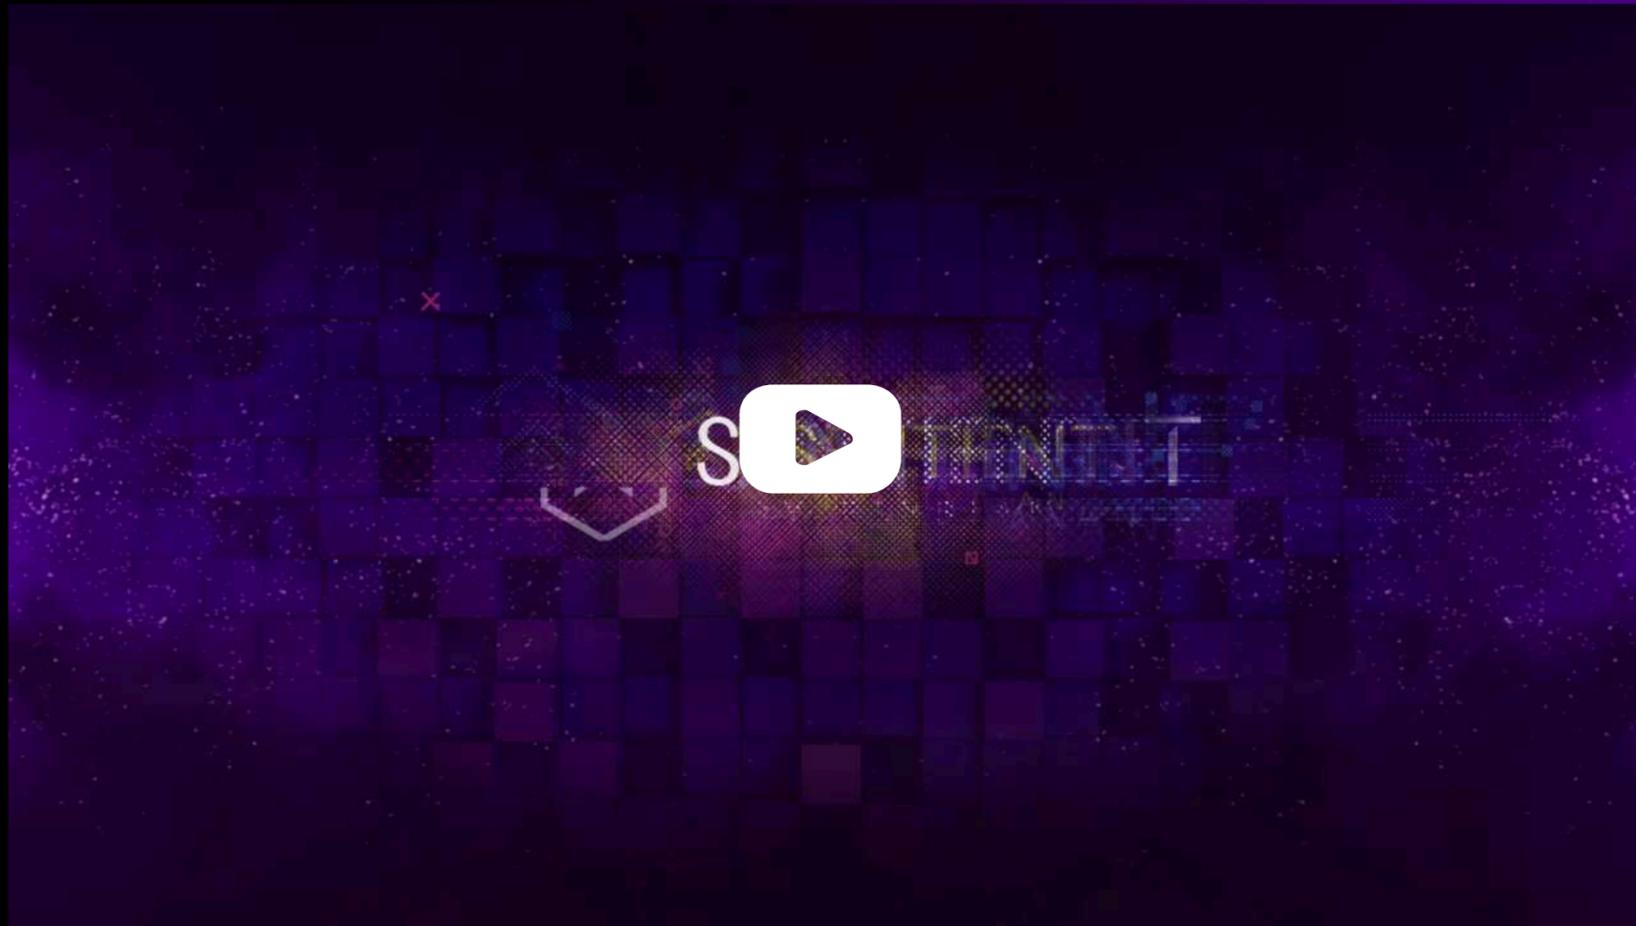

Visitors are captivated by a kinetic globe that dynamically presents key insights. As they approach, the globe invites interaction, unveiling topics on innovation and technology transfer.

It smoothly expands into four sections, each highlighting a different initiative before seamlessly reforming into a cohesive display.

This activation delivers an engaging and informative experience, leaving visitors inspired by advancements in technological innovation and workforce development.

Kinetic Discovery Corner

Visitors are welcomed by a striking kinetic table and a vibrant LED backwall, setting the stage for an engaging experience. Visitors can interact with the transparent OLED covering features, product or even the brand.

The kinetic table enhances the visual experience with mood graphics and colors. The LED backwall projects relevant visuals and data that complement the chosen topic.

This activation creates an immersive and interactive environment, allowing visitors to engage directly with what the brand is offering. They leave feeling informed, gaining valuable insights into the diverse services offered and their impact across various industries.

Kinetic Lenticular Facade

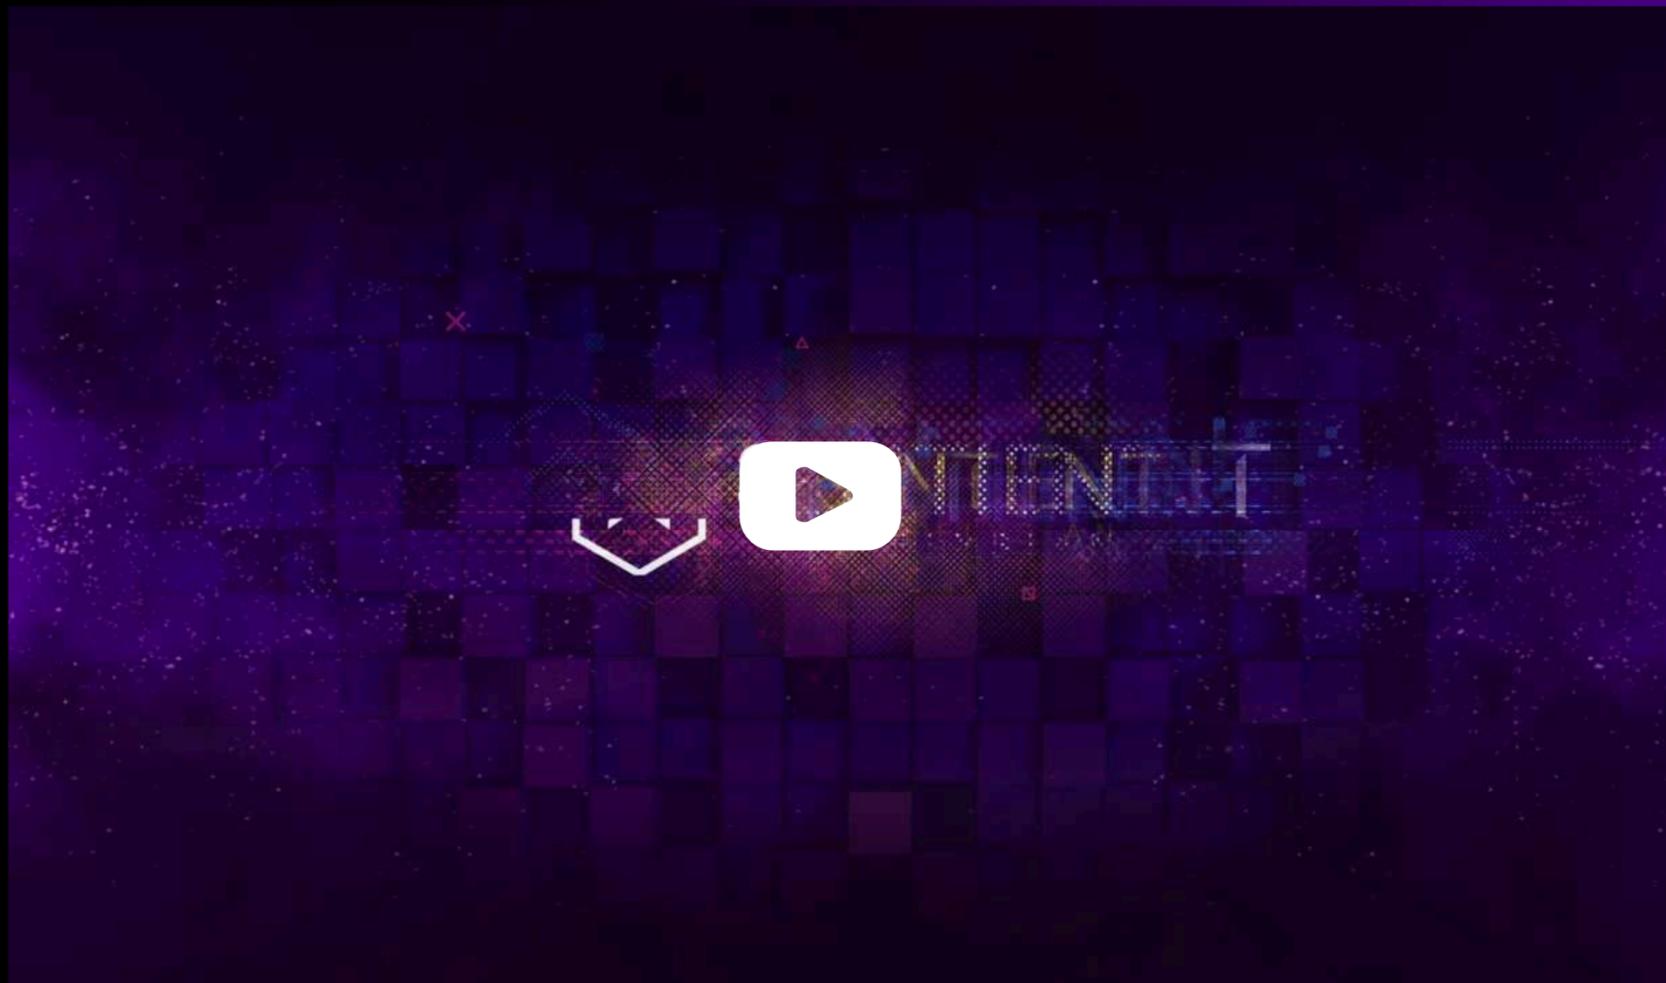

Visitors are drawn in by its ability to shift between various designs in real-time, enhancing engagement and interaction with the content.

The LED-based lenticular displays offer dynamic, real-time design capabilities, shifting between various looks, animations, and videos, and are versatile enough to match event themes or architectural needs, creating captivating visual experiences for exhibitions and brand activations.

Whether it's a brand activation or a large-scale event, the facade adapts effortlessly to different themes, captivating audiences at every turn. This revolutionary facade transforms kinetic architecture into living art. By showcasing vibrant animations and videos, it offers endless design possibilities, ensuring every event leaves a lasting, unforgettable impression on attendees.

Kinetic Ceiling

As guests look up, the kinetic ceiling animates the space with fluid, dynamic motion. Captivating visitors, it enhances ambiance, sparks curiosity, and reinforces your brand's innovation.

The kinetic ceiling displays synchronized motion, customizable lighting, and effects creating an unforgettable experience, amplifying both visual and emotional impact. Fully adaptable, it can fit any stand or venue, serving as a temporary showstopper or a permanent installation to add an artistic, tech-driven touch to any space.

Kinetic Hoist Platform

Visitors step into the thrilling Race Elevate zone, where they are securely fastened to the floating race platform. For an enhanced experience, they can use VR goggles, fully immersing themselves in a high-speed, adrenaline-pumping race.

The platform seamlessly syncs with the VR visuals and the massive LED screen, immersing users in every twist, turn, and speed boost, making them feel like they're behind the wheel of a real race car. Once the race ends, users are smoothly lowered, and their performance is displayed on the screen, leaving them exhilarated and eager for another round.

Race Elevate technology can be used for brand activations, exhibitions, entertainment parks, corporate events, retail showrooms, sponsorships, marketing campaigns, and festivals, offering an immersive, high-energy racing experience to engage audiences and create unforgettable interactions.

INTERACTIVE EXPERIENCE SYSTEMS

Adaptive Perspective Display

It brings digital content into the physical world by responding naturally to the viewer's movement. Using camera-tracked perspective awareness, the visuals shift in real time as a person changes position, creating a convincing sense of depth and spatial realism—without headsets or wearables. From the user's point of view, the experience feels effortless and intuitive. The display reacts the way real objects do, encouraging exploration through simple movement.

A single screen begins to feel volumetric, responsive, and alive, turning passive viewing into an embodied experience. From a product perspective, this enables spatial storytelling rather than flat presentation. Architecture, products, environments, and data can be revealed in layers, understood from multiple viewpoints, and experienced with a sense of scale and presence. The result is a high-impact medium well suited to product and architectural visualization, real estate and mobility showcases, and immersive exhibition environments where clarity, realism, and engagement matter most.

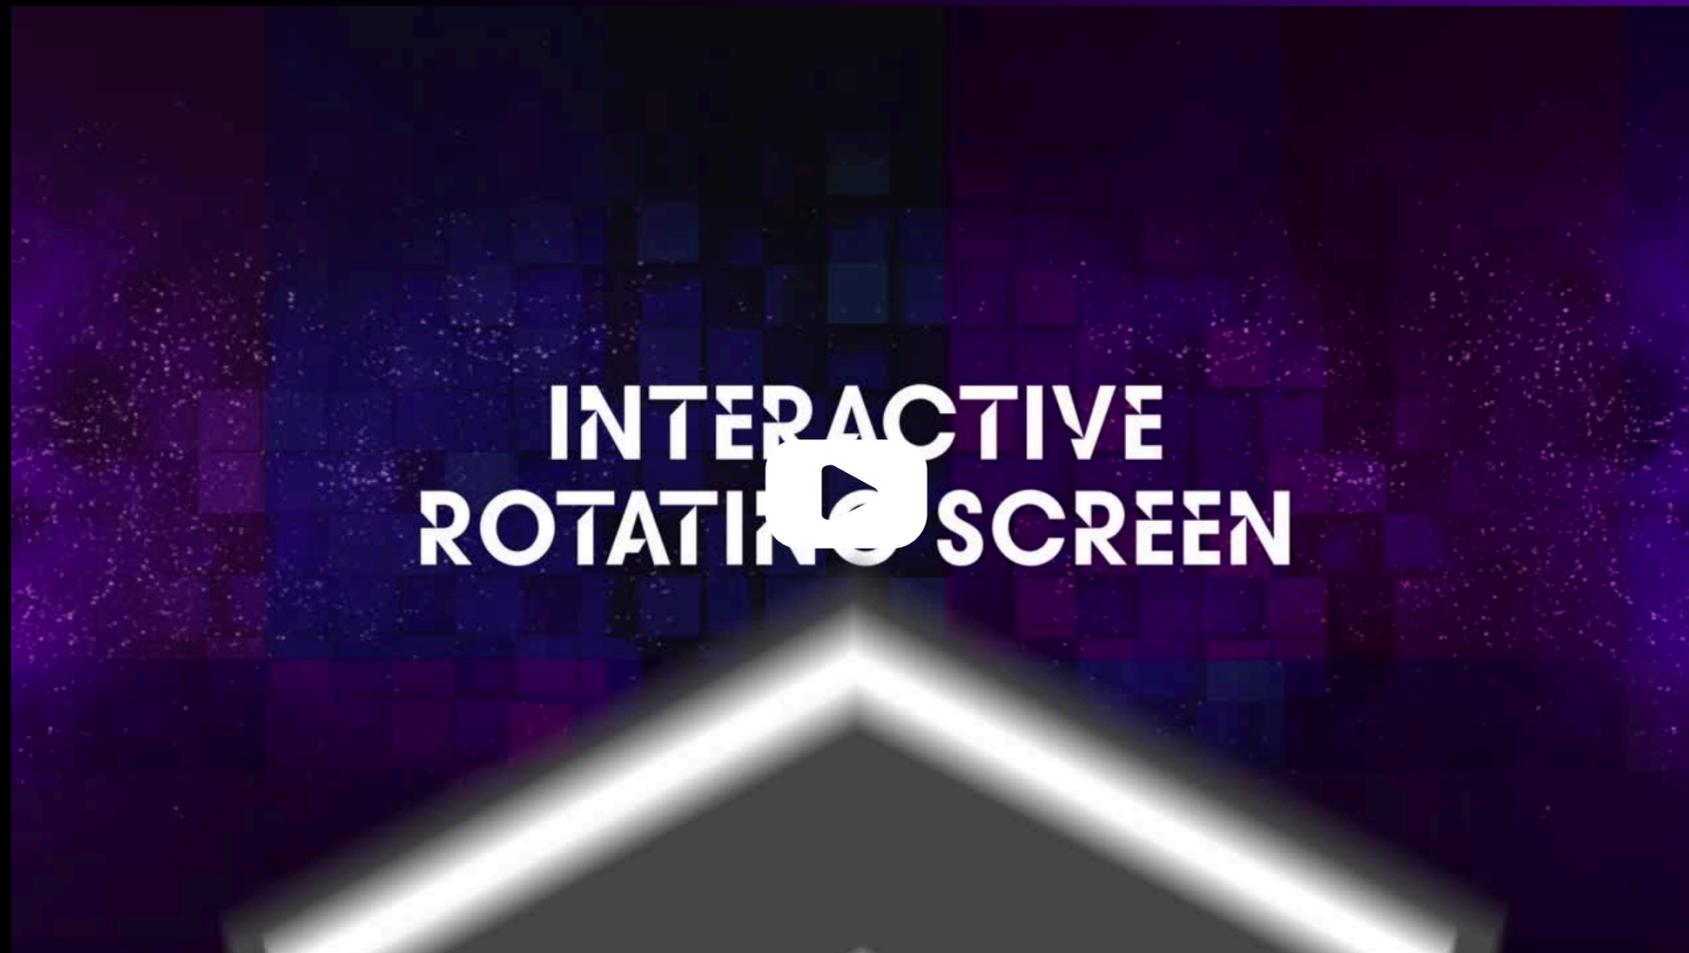

AI Video Experience

From the moment a guest steps into the booth, the AI Video Experience feels instant and magical. A single photo is captured, and within seconds, it transforms into a cinematic, animated video or GIF—playing back on a large LED screen as a personalized micro-story.

Users guide the experience by choosing a visual theme or using voice prompts, watching as their image comes alive with motion, atmosphere, and stylized effects. Behind the scenes, multimodal AI analyzes facial detail, body pose, lighting, and environment to enhance, animate, and extend the scene in real time. The result is fast, immersive, and deeply shareable—turning a simple capture into a moment people remember.

Interactive Rotating Screen

Visitors are introduced to a future-ready platform that automates data classification and cost mapping, helping reduce operational backlogs and improve system accuracy. Their attention is first captured by a rotating central display ring, where a circular kinetic screen presents an evolving data landscape.

Gesture or touch inputs trigger synchronized reactions across surrounding branch screens, immersing users in real-time dashboards, validation insights, and forward-looking workflow scenarios.

The feature element is a powder-coated metal display ring suspended from a modular ceiling grid, containing a circular screen framed with reflective vinyl and tinted glass.

Surrounding branch screens are flush-mounted into HPL wall panels, displaying dashboards and narrative content supported by integrated lighting.

A coordinated AV system synchronizes visuals, sound, and motion. Triadic seating pods and communication-enabled demo stations facilitate focused interactions and live explorations.

Future Forge Booth

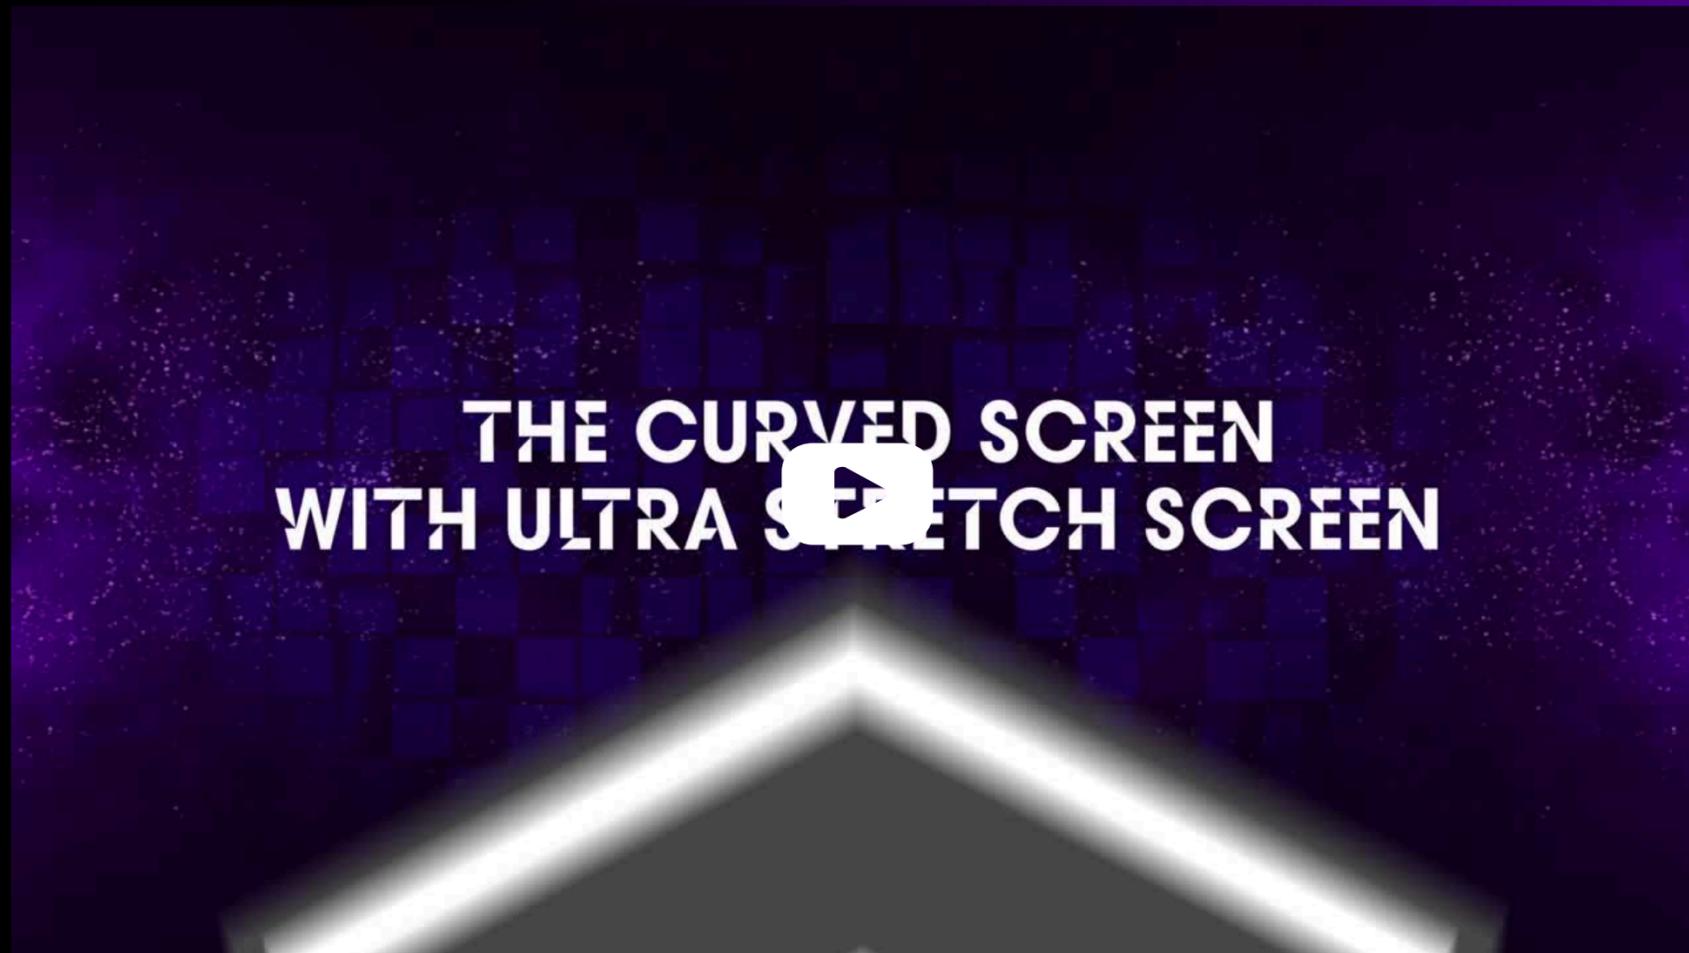

This immersive activation introduces visitors to the core pillars of the ecosystem: Each pillar is represented by a mini holotube, designed with a distinct UI theme and visual identity that reflects the pillar's purpose. The holotubes act as physical keys to the digital experience.

The system instantly recognizes the holotube and triggers a tailored content journey on the 75-inch display.

The screen transitions into a fully immersive sequence—featuring animated product walkthroughs, dashboard-style interfaces, customer scenarios, benefit highlights, and motion-designed storytelling that aligns with the selected pillar.

This installation transforms complex financial offerings into an interactive, tactile, and intuitive experience. Pairing physical objects with dynamic digital content helps visitors understand the ecosystem at a glance—making each pillar memorable, approachable, and clearly differentiated.

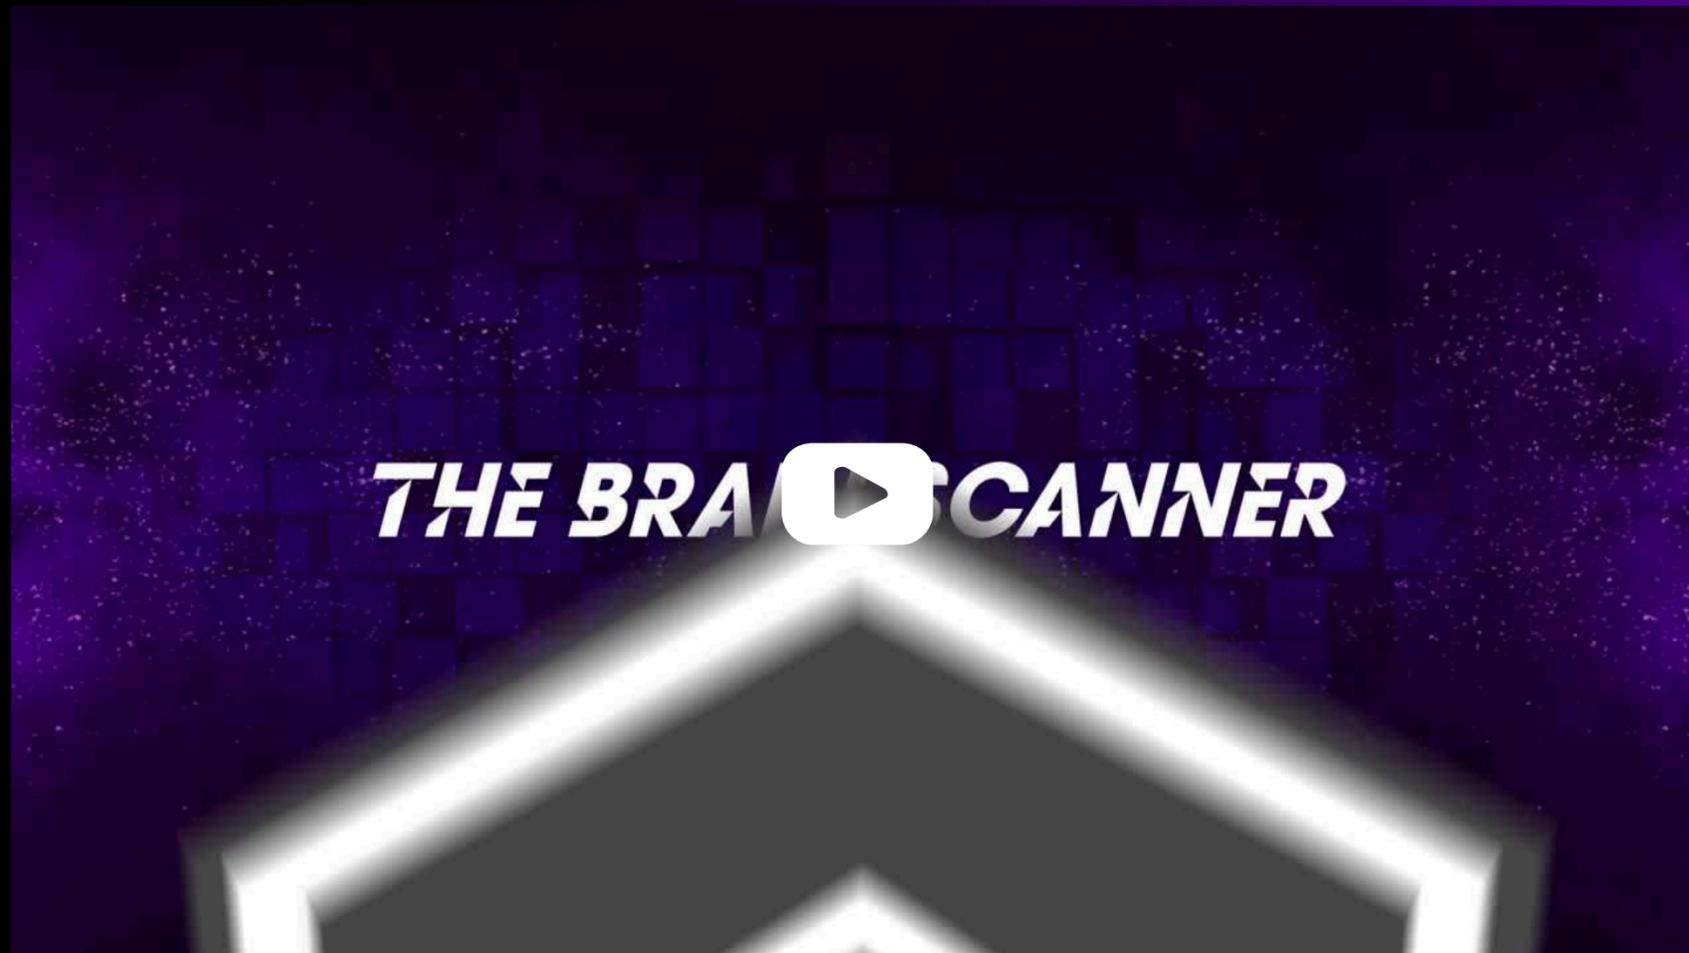

Curved Screen with Ultra Stretch Screen

This installation blends precision and warmth through a dual-display system featuring a 55-inch curved OLED screen paired with an ultra-stretch interactive touchscreen. The curved screen surrounds viewers with rich panoramic visuals, while the stretch display adds an intuitive layer of exploration. With a single tap, the experience begins.

Visitors can navigate themes such as preventive health, community programs, and wellbeing initiatives—each revealed through fluid transitions and illuminated motion paths. Every interaction unlocks deeper insights, creating a personal and human-centered connection to the platform’s mission.

Brain Scanner

immersive biometric experience that uses psychographic cues to curate personalized content for every visitor. Inside a softly lit neural pod, guests complete a 90-second sensory survey guided by an AI. Abstract visuals, soundscapes, and instinctive choices reveal emotional patterns that the system transforms into a customized cinematic content burst.

Visitors enter the pod and activate a biometric scanner.

A fast sequence of abstract prompts and surreal visuals unfolds, encouraging instinctive responses.

Data particles form a glowing emotional profile—from Adrenaline to Empathy and beyond.

The experience concludes with a personalized montage and a set of content recommendations delivered via QR code.

Multi-sensory light, audio, and motion cues create a focused, atmospheric environment.

Biometric input and responsive visuals make each journey feel unique and personal.

Translating emotional signals into real-time psychographic profiles.

Visitors leave with a tailored recommendation set and a clear sense of intelligent content curation.

The Quest Station

Visitors sign in using a digital kiosk, after which a short onboarding tutorial appears which explains the game's objective setting the tone for an engaging and purpose-driven experience.

Once registered, visitors receive a Smart Band, which activates the interactive gameplay. The band tracks movement, interactions, and performance throughout the experience, making each user's journey unique.

visitors step into the game environment. Using the smart band, they collect tokens. After completing the first challenge, the player advances to the next level where they can choose between different missions.

At the end of the journey, players reach the Leaderboard, where their total points, top choices, and best achievements appear in real time.

The Lens with Podium

The Lens Podium is an iconic interactive sculpture designed to transform complex digital systems into a powerful physical experience. It captures attention through depth, reflection, and motion, turning invisible data into a striking visual statement.

The installation features a circular mirrored structure with wrap-around flexible LED surfaces and a front-facing interactive control interface. Through gesture and touch, visitors activate three-dimensional motion graphics that visualise dynamic data flows and system connections in real time.

Fully customizable in size, content, and visual style, The Sovereign Lens is ideal for exhibitions, flagship brand experiences, and technology showcases—built to communicate scale, control, and digital authority with impact.

Augmented Reality Sliding Screen

Visitors are drawn to a captivating LED Wall with an embedded slider screen that dynamically displays relevant information about the brand and its products.

An integrated back LED provides real-time information about the brand, allowing visitors to explore more detailed information by sliding the screen and viewing.

This activation offers an engaging and informative experience, leaving visitors inspired by the brands dedication to technological innovation.

Analog Augmented Reality Sliding Screen

Guests will engage with an interactive steering system and live rotating car models for a hands-on experience. Visitors can control the experience via tablet, enjoying a dynamic, AR-driven environment.

The cutting-edge technology blends augmented reality with a tablet-controlled steering system for an immersive, interactive experience. Live rotating car models respond to user input, while the AR manual sliding screen lets customers explore the brand in an engaging new way.

Perfect for product showcases, trade shows, and any space looking to elevate customer engagement.

Tangible Table + Curved Screen

Visitors begin by tapping or selecting elements on the tabletop interface.

The table presents content in an intuitive grid or icon-based layout, allowing users to browse through different categories at their own pace. When a user selects a program, initiative, or topic on the Tangible Table, the system immediately links this interaction to the main LED wall. The main LED wall comes to life, presenting large, high-impact visuals such as videos, animations, and infographics related to the visitor's chosen topic. Visitors can continue selecting additional items on the Tangible Table to explore more content. Each selection updates the LED wall instantly, creating a continuous, fluid learning journey.

Sustainability Table

The Sustainability Table offers an immersive experience where users can explore 3D sustainability models in VR, interact with event-related data through a transparent touchscreen, and see physical models rotate dynamically based on their selections. A dial control further enhances engagement, allowing visitors to navigate and manipulate content intuitively.

Ideal for exhibitions, corporate events, and sustainability showcases, this activation provides an engaging, educational, and interactive way to explore key topics.

Mannequin with LED Head

Visitors will interact with the Mannequin as it presents a multi-perspective custom created content. It also serve as an interactive tech or information enquiry kiosk to visitors in all direction.

The Mannequin can also be further customized to personalized interactions where they can be upgraded with cameras enabling precise user tracking for tailored interactions using AI that can leave a lasting impression for visitors.

Static Lenticular Facade

A striking overhead installation designed to draw attention from across the exhibition floor, the Lenticular LED Pillar Facade transforms vertical space into a dynamic brand statement. Suspended in a three-sided curved formation, the LED pillars create depth, motion, and visual rhythm that evolve as visitors move through the space.

The facade is composed of 25 cm-wide LED pillars arranged in modular rail “trains,” with varied pillar heights to create a layered, dimensional effect. Fully programmable content—static, kinetic, or animated—flows seamlessly across the structure, enabling powerful branded patterns and motion-driven storytelling.

Serving as both a visual landmark and immersive media canvas, the installation enhances stand visibility, reinforces brand identity, and delivers high-impact engagement through light, motion, and form.

Holocube + OLED

The Transparent OLED display merges digital and physical worlds, offering an immersive, touch-sensitive experience. It presents information while remaining transparent, allowing visitors to see real-world surroundings.

Behind it, 3D holograms bring products to life, enabling hands-on interaction. Combined with a hologram room, this setup creates a futuristic atmosphere that reflects the healthcare sector's transformation.

Captivating visuals and interactive holograms immerse visitors in a dynamic, informative experience blending innovation, technology, and real-world context.

Immersive Room

Designed for immersive interactivity, the model brings scenarios to life with a high level of realism, aligning seamlessly with the brand's vision and allowing the visitor to immerse themselves with the content presented.

This technology allows you to showcase multiple scenarios or a single concept using a 3D physical model enclosed in glass. Fully customizable, it enables you to highlight key features or products, creating an engaging experience that enhances brand and product awareness.

Integrated LED screens display dynamic content, while discreet triggers enable smooth interaction, controlled either by a presenter using a clicker or via an iPad, ensuring a seamless and engaging presentation.

Isolation Pod

Visitors are drawn to the sleek isolation pod, offering a personal and immersive experience. Inside, they find a comfortable seat and a vibrant transparent screen showcasing your products and services. Using touch controls, they can easily explore specific services of interest, leaving with a deeper understanding of your brand.

The pod features a transparent screen and intuitive touch controls, creating an interactive, dynamic display. This tech-driven activation provides a focused, engaging way for visitors to explore your brand's offerings and gain awareness of your products and services.

SIGNATURE INSTALLATION

Paradigm Tunnel

As visitors walk through, the walls become the ceiling, then reappear on the other side, enveloping you in a story unfolding around you. The audio narration guides your journey, taking you on an epic adventure. Think past triumphs, present awesomeness, and a launchpad to the future!

The transformation passageway is a portal to a world of dynamic visuals, where 85-inch Ultra HD displays dance around you. Each screen seamlessly shifts and transforms, creating a mind-bending immersive experience.

The purpose of this tech is to leave a powerful message unfolds, leaving a lasting impression on everyone who walks through.

The Gyroscope

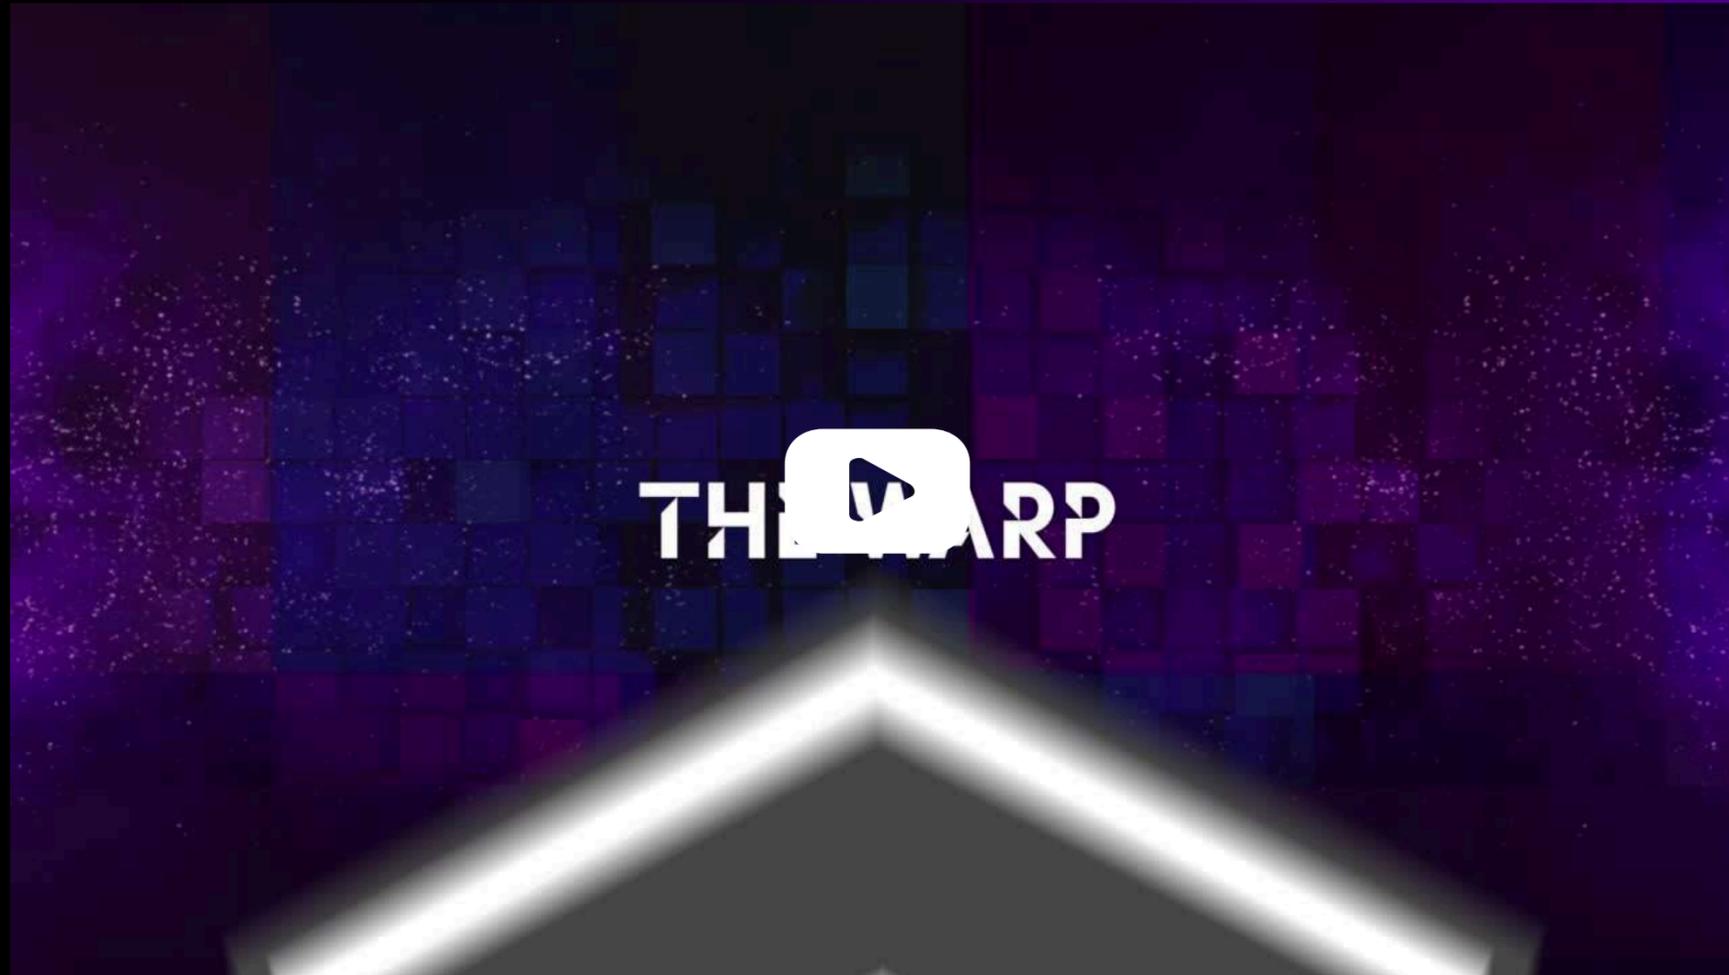

Visitors will engage with the installation that is designed to capture attention and spark emotions and create truly unforgettable moments.

A kinetic 4.2 meters in diameter, an ode to the quantum drum's gyroscopic magic. Its four ringed wonders, adorned with pixel-perfect LEDs and sleek chrome, whirl gracefully, projecting mesmerizing content as they dance through space.

The purpose of this tech is for brand narratives, a muse for live performances, an interactive gateway to novel experiences. It offers a revolutionary solution: captivating kinetic installations that transform storytelling! The size of the tech can be customized according to the available space or client requirement.

The Warp

Visitors will experience a convergence of art and technology with The Warp, a symphony of light and motion within an octagonal frame. Featuring high-resolution imagery and bespoke motion, its adaptable size fits any space, enhancing brand storytelling, live performances, and event atmospheres.

The Warp is a kinetic installation inspired by Anthony Howe's art, featuring 36 displays that weave motion and high-resolution imagery within an octagonal frame, offering versatile stand-alone or unified experiences, with an adaptable size to suit client needs and available space for any event.

The Warp is an immersive journey into innovation, offering brands and event organizers a transformative platform for exhibitions, product launches, live performances, and innovation hubs, ensuring an unforgettable impact.

The Metamorphosis

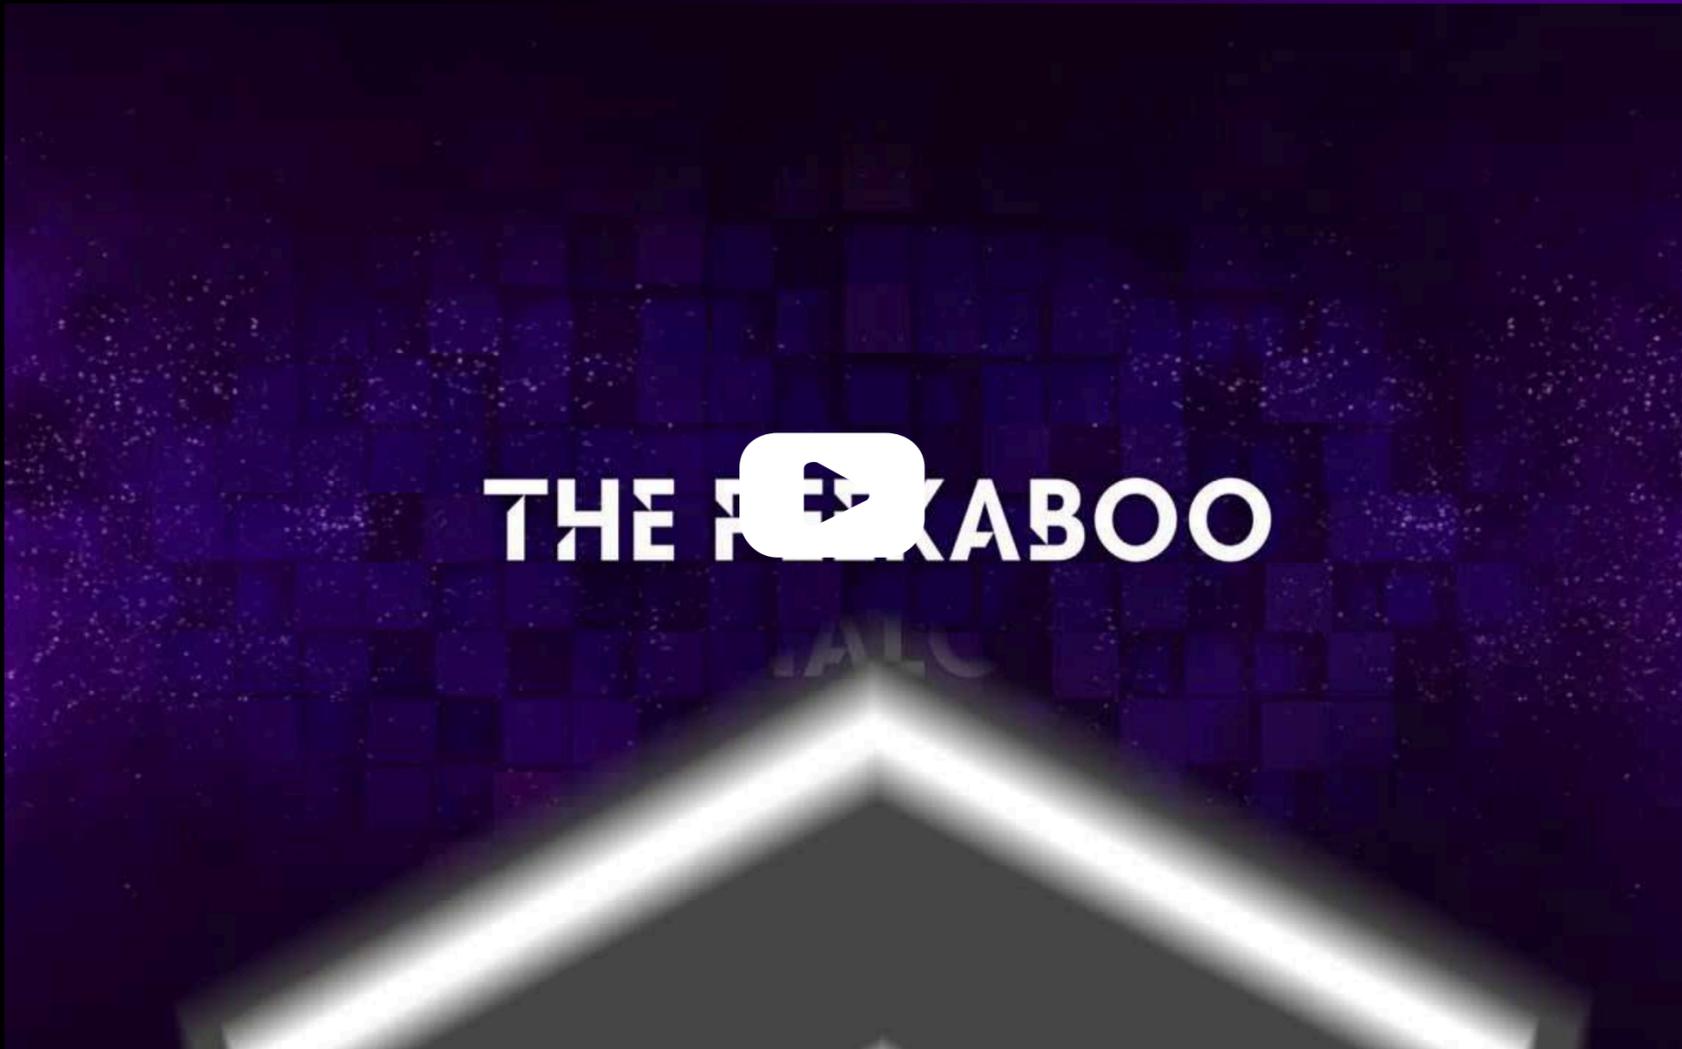

Visitors are instantly captivated by a breathtaking kinetic shapeshifting orb sculpture, shimmering within a 6x6m translucent mesh cage. The orb's reflective surface dances with whimsical digital content displayed on the mesh screens, creating an immersive visual spectacle.

Dynamic animations serve as a tribute to key innovations and advancements in defense capabilities, creating a rich, immersive atmosphere. The orb's shapeshifting nature symbolizes the continuous evolution and progress driven by relentless R&D efforts in the defense sector.

Each transformation represents a new breakthrough, inspiring visitors with a visual narrative of growth, adaptability, and the boundless potential of cutting-edge research.

The Peekaboo

The Peekaboo journey captivates audiences with its rotating LED display, engages through interactive elements, immerses with synchronized audio-visual experiences, creates lasting impressions through multi-sensory stimulation, and converts engagement into action through emotional connection.

Peekaboo features a 6 meter rotating platform visible in crowded venues, high-resolution LED displays for vibrant content, precision motion control for smooth movement, sensors that respond to audience interactions, and directional audio that enhances immersion.

Peekaboo delivers maximum impact at product launches, trade shows, and major corporate events where brands need to stand out and create memorable audience experiences.

The Hive

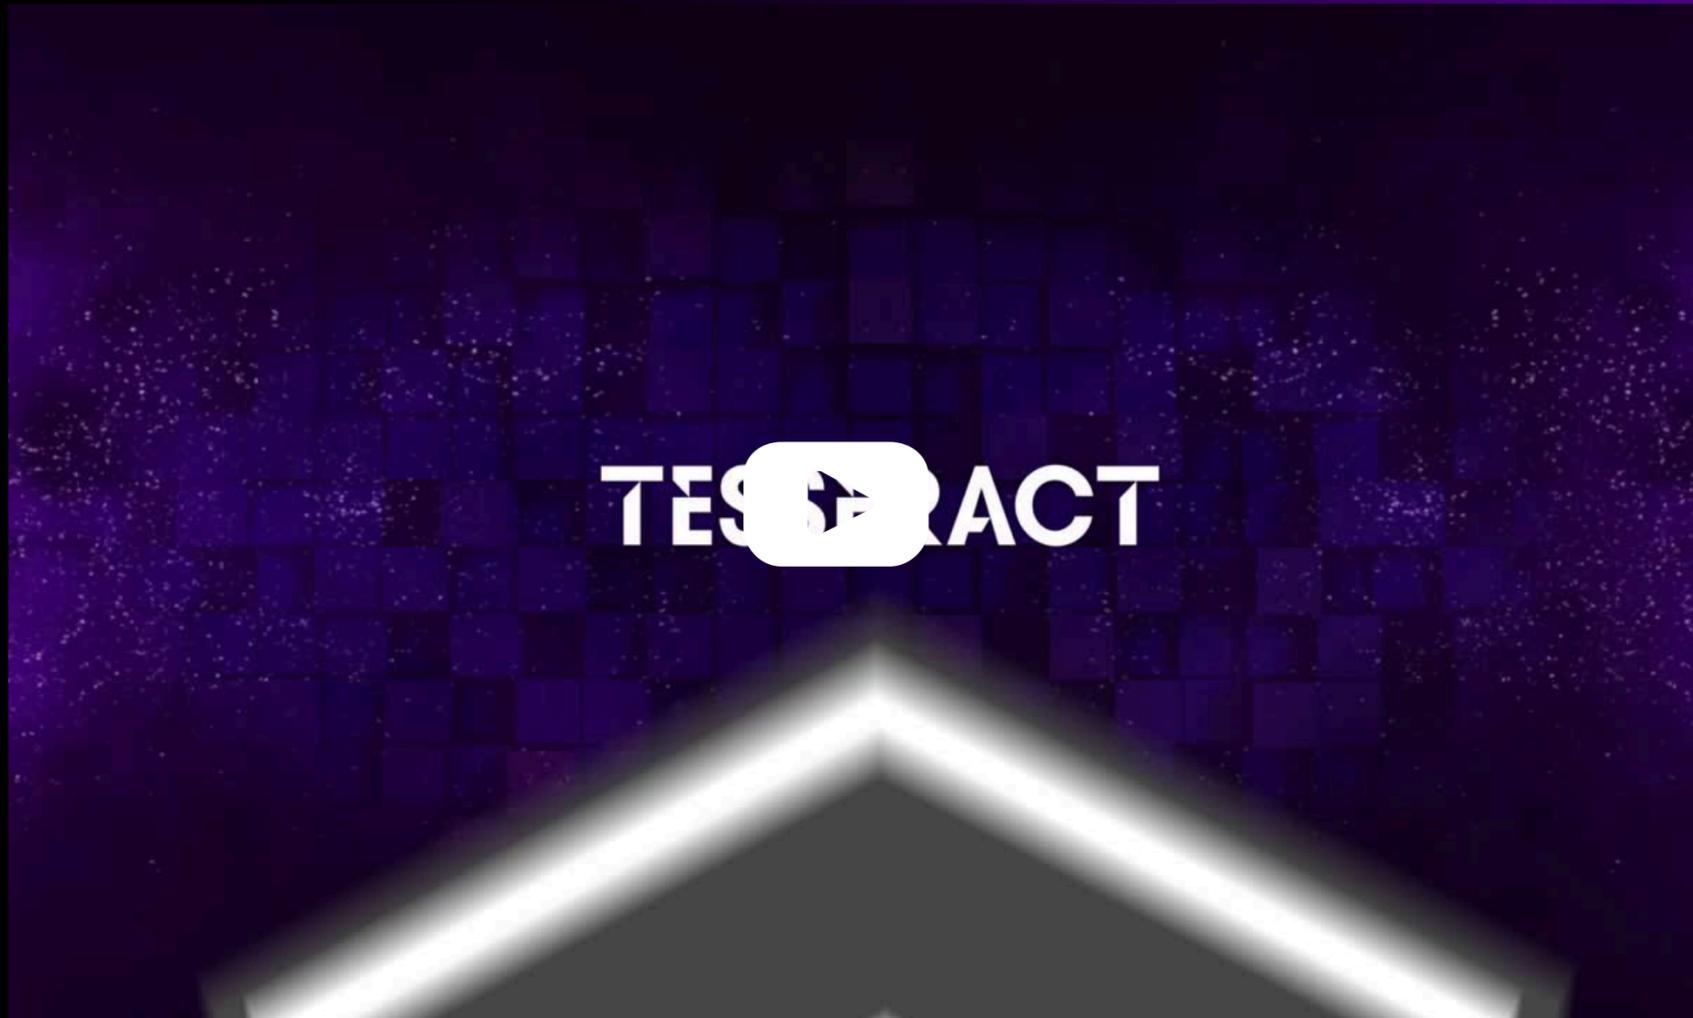

Visitors won't just see a sculpture—the technology integrates holographic volumetric displays, bringing captivating content to life.

A towering masterpiece standing 4.2 meters tall. Its reflective metal surface conceals a marvel of technology: silicon-edge neopixel DMX LEDs intertwine to form a skeletal framework, adorned with 33 ultra-HD displays along its ascending spiral.

This tech can be used individually or in concert. The screens mesmerize with immersive graphics, elevating brand narratives to new heights. Picture it: a holographic performer dances amid audio-reactive mood content, or a sentient AI engages in real-time dialogue, its answers complemented by auxiliary visuals.

The Tesseract

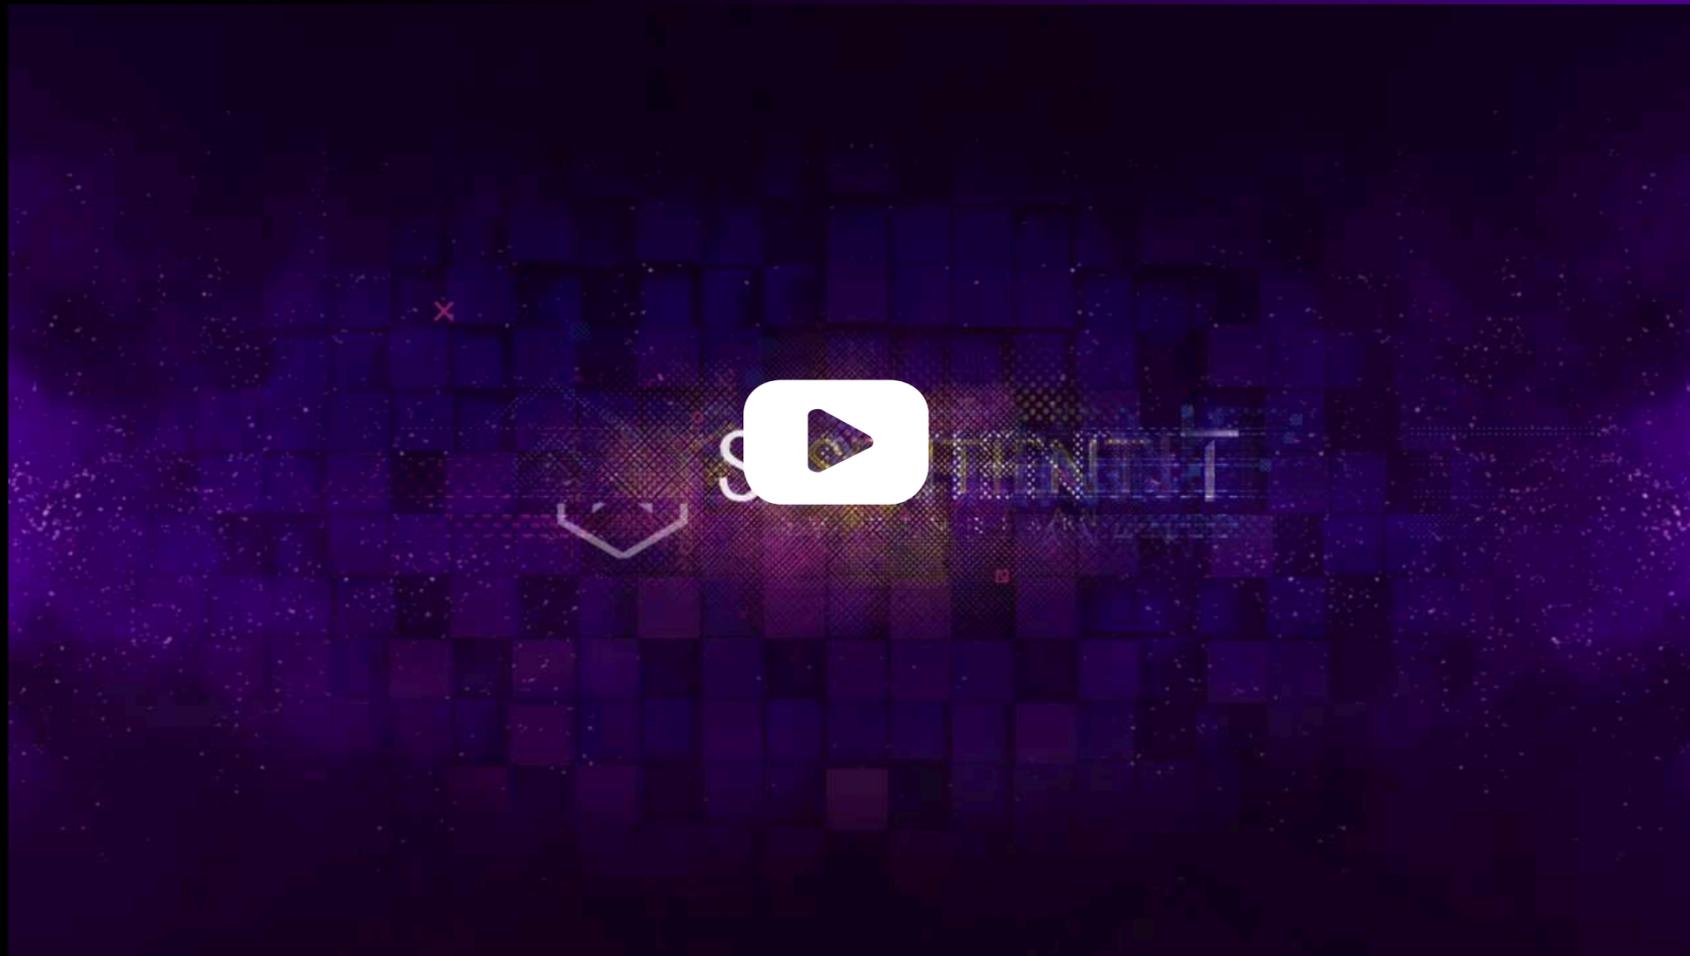

Visitors are instantly captivated by the stunning Holographic Tesseract, featuring multiple transparent screens that create a striking 3D effect. As they draw closer, the tesseract comes to life, showcasing vivid holographic content that represents the brand's logo, their products and features.

Dynamic animations serve as a tribute to key innovations and advancements creating a rich, immersive atmosphere. Holographic elements swirl and morph around visitors, evoking a sense of being inside an imaginative landscape of technology, innovation, and possibility.

This activation provides a mesmerizing experience, inspiring visitors with a powerful vision of your brand and a commitment to cutting-edge tech solutions.

The Celestial Spiral

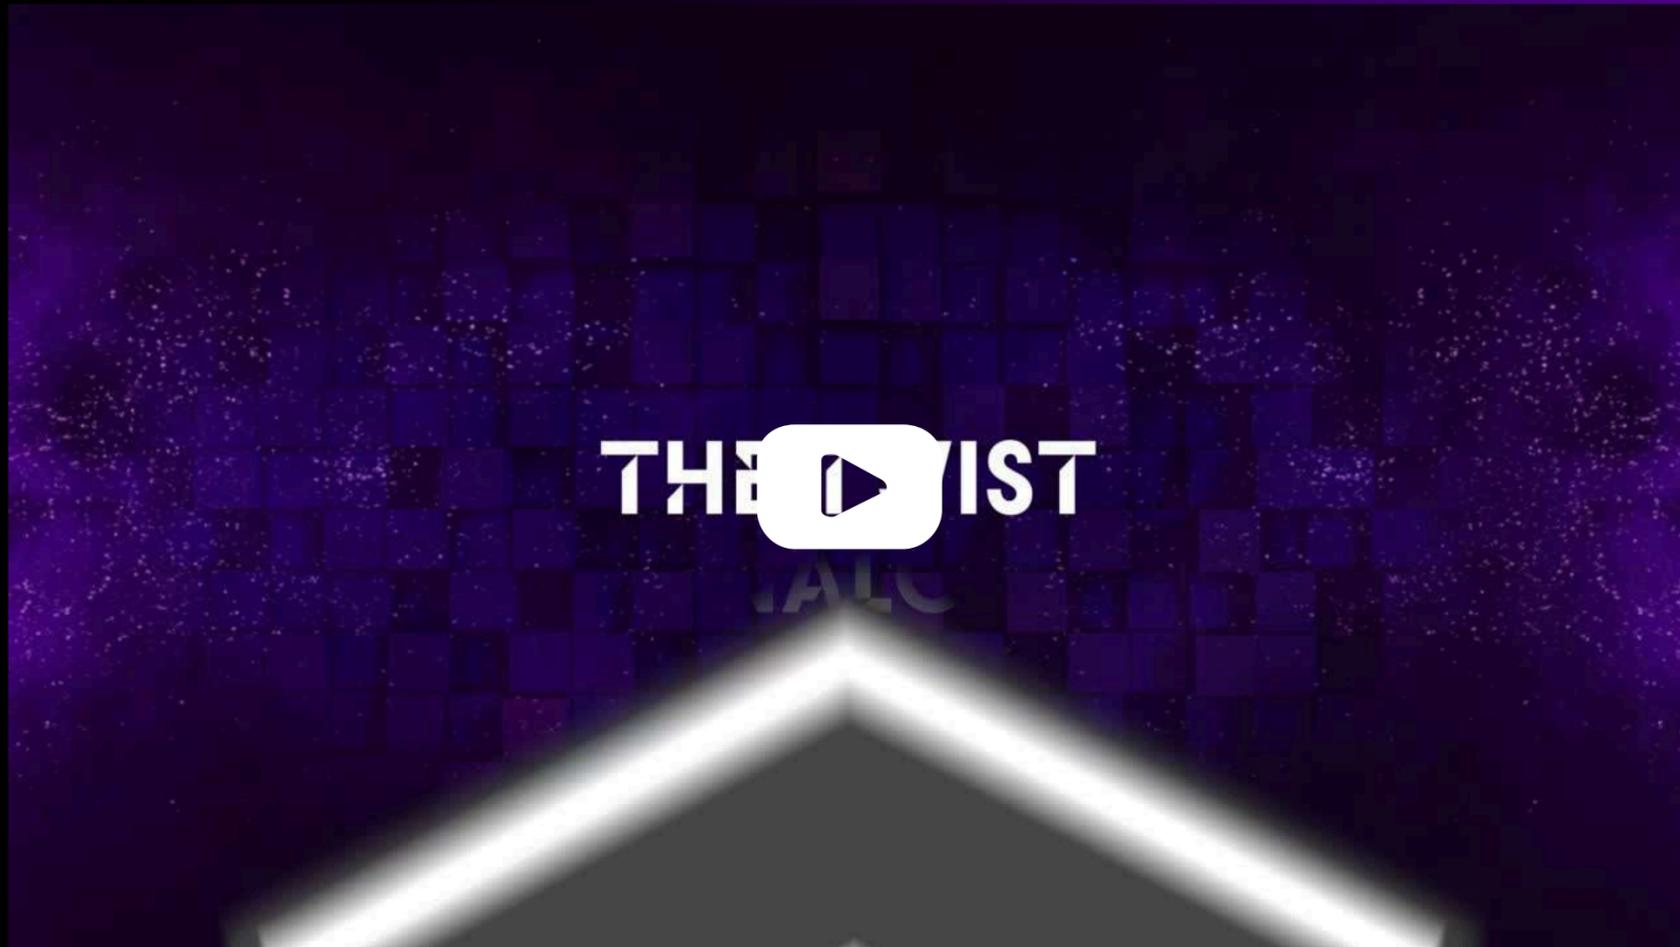

Visitors will journey through an architectural marvel, where its reflective volumetric screens.

The Celestial Spiral is a cutting-edge storytelling display that combines cutting-edge tech with mesmerizing visuals. It features 33 ultra-HD displays, a 4.2-meter spiral, and real-time AI interactions.

The tech allows guests to showcase the brand story in an immersive and unforgettable way, offering endless possibilities for captivating graphics and interactive experiences.

The Twist

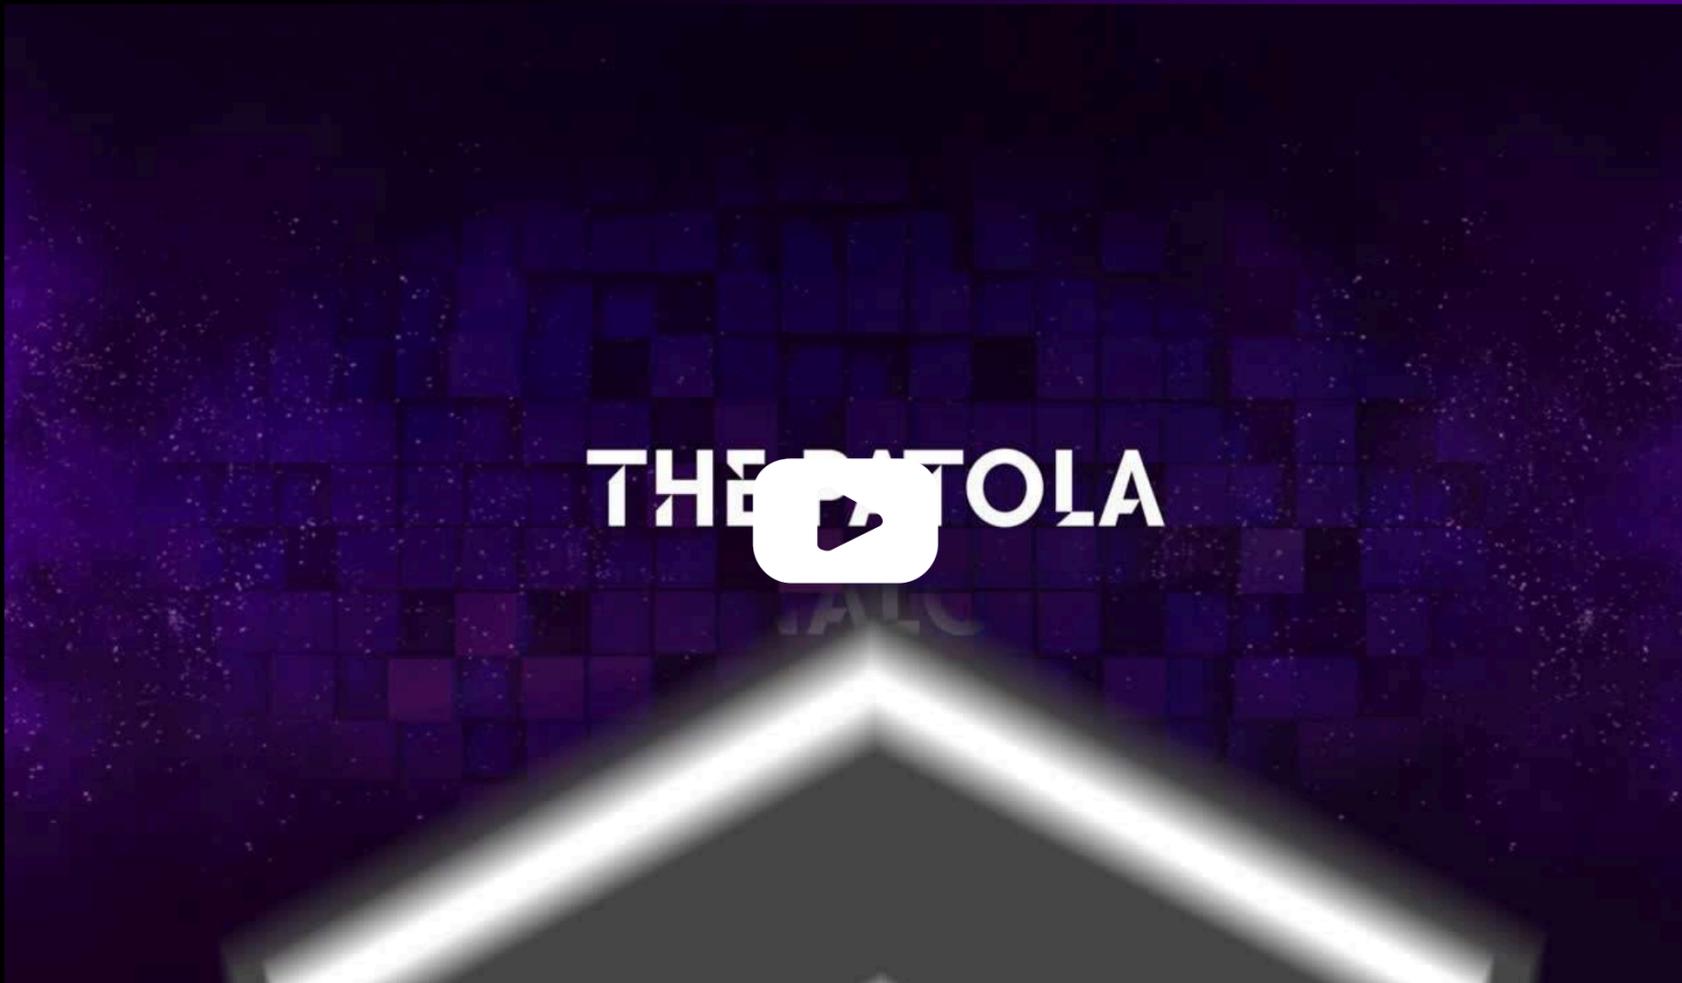

Visitors will journey through a 4.2-meter architectural marvel, where its reflective mirror base immerses them in a visual celebration of the city's ambition to redefine the digital frontier.

An awe-inspiring blend of synchronized Neopixel DMX LEDs, ultra-HD displays, and holographic visuals surrounds guests in a captivating digital story. The sleek, sustainable design, crafted from reclaimed materials, reflects innovation and ecological responsibility.

Ideal for exhibitions, trade shows, brand activations, and immersive events, bringing your brand's vision to life in a striking, environmentally-conscious way.

The Patola

As visitors enter, they are captivated by Patola, a dynamic centerpiece blending art and technology. Its rotating structure symbolizes energy and power, enhanced by synchronized audio, LED rings, and light effects, creating an unforgettable spectacle.

The rotating LED rings serve as a striking visual metaphor for sustainability, movement, and renewal—echoing the perpetual cycle of nature and innovation. Whether showcased at an exhibition, a corporate event, or a grand activation, this kinetic installation stands as a powerful statement of progress and transformation.

Beyond its aesthetic appeal, Patola is a true showstopper, adaptable to various themes and event narratives. By integrating Patola into an event, brands can create a compelling visual and sensory experience that not only draws attention but also sparks thought-provoking conversations about the future of energy and sustainability.

The Quantum LED Sculpture

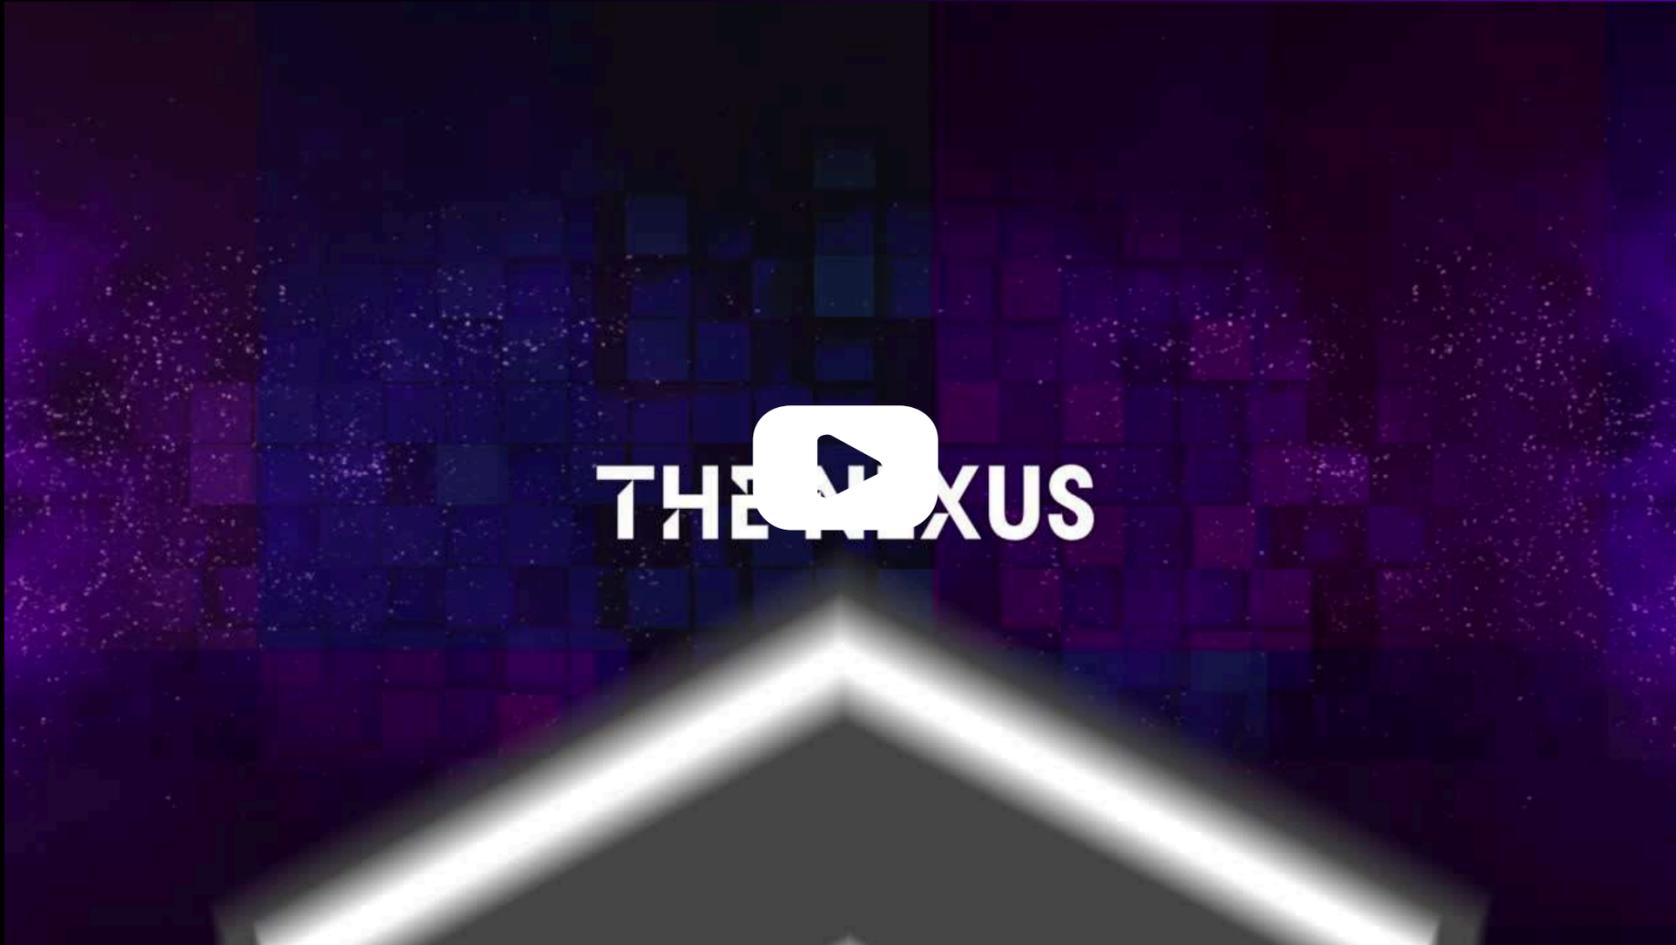

The Quantum LED Sculpture is designed to grab attention and enhance your brand experience at any event. As the centerpiece, it captivates audiences with its dynamic LED structure, allowing brands to showcase their unique identity within the sculpture. Customize it to fit your event's theme and size, making it a versatile and unforgettable feature.

The Quantum LED Sculpture is a long, LED-based installation with a customizable size and shape, allowing brands to integrate logos, messaging, and creative elements, while dynamic lighting effects enhance the event ambiance, making it perfect for exhibitions, corporate events, and brand activations.

Tailored to client specifications, the Quantum LED Sculpture offers limitless possibilities in design and functionality, ensuring your brand's presence is bold and impactful. Ideal for creating immersive experiences and leaving a lasting impression.

The Nexus

The Nexus is an executive immersive chamber designed for high-level strategic engagement at exhibitions and flagship events. It places decision-makers at the center of the brand's digital ecosystem, transforming innovation, leadership, and national ambition into a focused, high-impact experience built for VIPs, government stakeholders, and enterprise leaders.

The Nexus is a circular, architecturally elevated enclosure featuring panoramic LED walls, a mirrored dome, and a responsive digital floor. Entered through a monumental arch and subtle ascending pathway, the space showcases AI-driven 5G intelligence, predictive maintenance, and autonomous networks through immersive visuals, spatial sound, and controlled atmospheric lighting.

Fully customizable in scale, content, and narrative, The Nexus is tailored to different strategic objectives and industries. It is ideal for exhibitions, executive briefings, and sovereign infrastructure storytelling—where authority, clarity, and long-term vision must be instantly felt.

The Tunnel of Fame

Visitors enter the customized tunnel and are immediately immersed in interactive holoboxes, each featuring expert content and engaging informational displays. As they move through, they can explore various touchpoints to learn more about the brand, products, or industry. The experience concludes with a dynamic exit, leaving visitors informed and connected to the brand.

A 6x5 meter tunnel with six holobox units (three on each side), each featuring a podium and touchscreen table for interactive FAQs and content. The content can be customized to highlight experts from the company, brand, or industry for an immersive experience.

Additionally, the tunnel can serve as an engaging entrance or a dynamic ground activation space dedicated to product or brand awareness.

The Luma Chandelier

Luma Chandelier is a kinetic lighting installation composed of multiple circular LED rings suspended at varying heights, forming a dynamic, sculptural presence within large-scale environments.

Each ring is mounted on a DMX-controlled motorized winch, enabling precise vertical movement, rotation, and synchronized choreography. The structure allows individual rings to operate independently or as part of a unified motion sequence, creating layered compositions of light and movement in three-dimensional space.

Through carefully timed transitions, the chandelier can expand and contract like a mechanical iris, cascade through tiered elevation patterns, perform slow rotational sweeps, or execute dramatic ascents and descents. These movements transform the installation from a static overhead feature into a living, performative element—capable of responding to narrative, music, or environmental cues.

The 4 Transparent OLED 55 inch

A sculptural fusion of glass, light, and motion, this multi-screen installation features four 55-inch Transparent OLED displays rising vertically in perfect alignment. Each panel becomes a living window. Powered by self-emissive OLED technology, pixels illuminate with extraordinary clarity while transparent layers preserve the depth of the surrounding environment, creating a dynamic interplay between reality and the digital realm.

Content glides across the four synchronized screens, visuals data, products, and stories unfold with an almost holographic presence. Viewers are drawn into an experience that is both deeply modern and subtly magical.

Designed for high-end storytelling and immersive brand expression, this installation transforms every interaction into a moment of discovery. Whether revealing intricate product details, visualizing complex data, or crafting narratives that evolve across multiple layers.

EXECUTIVE TEAM

NADIA NAYYAR
Principal Project Manager

JULIA NAVOY
Chief Sales & Marketing Officer

**AISWARYA
UNNIKRISHNAN**
Chief Interactive Specialist

SNEHA SATHE
Creative Strategist

ANWAR AIT
Head of Marketing

AVINASH SHETTY
Lead Engineer

SAEED AL NAHARI
Head of KSA Branch

BARTOSZ JANKOWSKI
Technical Project Manager

LESLIE PEREZ
Head of Supply Chain
